Definitions for Column Headers

Performance Characteristic	Definitions
Brand and Model Number	How a particular lamp is identified. Retailers identify products they stock using the brand and model number. Some products may also be identified with a name or SKU, which is different from the brand or model number. Model numbers often contain wildcard characters, such as *, #, and X, that are placeholders for non-energy attributes, such as color.
Retail Product Number	In addition to model numbers manufacturers and retailers often use a retail number to identify products or packaging configurations. It is commonly a five (5) or six (6) digit number located on the front of the packaging or near the UPC code. This information provides the item number used by specific retailers or provides additional product numbers of multi-packs of the original qualified product (e.g. - AM09 (4-pack)).
Bulb Type	The lamp shape: bare-spiral, globe, bulged reflector (BR), elliptical reflector (ER), etc.
Base Type	Base type of the lamp: Screw base (E26, E17, etc.), bayonet bases, multiple pin bases (GU24, GU10).
Technology	The technology of the lamp: compact fluorescent light bulbs (CFL) and light emitting diode (LED).
Special Features	Most fixtures are designed to operate on an on/off switch. However, some fixtures have been designed with features to perform in specialized applications, such as with dimmers, three-way, or photo cell controls. Special features and compatibility with controls should be clearly marked on the product packaging, cut sheet or web site for the product.
Light Output (lumens)	A lumen is a unit of measure of the luminous flux or quantity of light emitted by a source or light bulb.
Wattage/Three-way wattage	The electric power a light bulb needs to operate is designated by watts (W).
Bulb Life	Bulb life is a rating of the estimated time (shown here in hours) a light bulb will last based on continuous testing at a laboratory. For example, to gain a 10,000-hour rating, 50% of the test samples must continue to operate to 10,000 hours or more.

Performance Characteristic	Definitions
Color Temperature (kelvin)	A description of the "color" of a light source measured by the Kelvin (K) scale. CFLs are available in a range of color temperatures. Lower Kelvin temperatures (2700-3000K) mean the light has a warmer (red-yellow) color, while higher Kelvin temperatures (4100-6500K) mean the light has a cooler (bluer) color.
Color Rendering Index (CRI)	Measure of the degree of color shift objects undergo when illuminated by the light source as compared with the color of those same objects when illuminated by a reference source of comparable color temperature.
Power Factor	The ratio of real power that flows to the lamp versus the amount of power actually consumed. A lamp with a lower power factor will draw more current than a lamp with a higher power factor for the same amount of useful power transferred.
Warranty	The number of years the lamp is covered under the warranty.
Date Qualified	The date the fixture was qualified as ENERGY STAR.

Key Efficiency Criteria

Performance Characteristic	Specification CFLs	Specification Integrated LED Lamps
Efficacy **(Total lumen output divided by input wattage)**	Bare lamp: Lamp power < 10W: 50 lm/watt 10W ≤ Lamp power < 15: 55 lm/watt Lamp power ≥ 15W: 65 lm/watt	Bare lamp: Lamp power < 10: 50 lm/watt 10 ≤ Lamp power : 55 lm/watt Decorative lamp: 50 lm/watt Directional: 40 lm/watt-45 lm/watt
Minimum Rated Life	Medium screw-base Covered, Globe and Outdoor reflector CFLs: ≥ 6,000 hours Bare medium screw-base CFLs and GU24-base covered, dimmable, and reflector Lamps: ≥ 8,000 hours GU24 Bare Lamps: ≥ 10,000 hours	Decorative: ≥70% Lumen Maintenance at 15,000 hours All others: ≥70% Lumen Maintenance at 25,000 hours
Correlated Color Temperature	Lamps must have one of the following designated correlated color temperatures (CCT): 2700K, 3000K, 3500K, 4100K, 5000K, or 6500K.	Lamps must have one of the following designated correlated color temperatures (CCT): 2700K, 3000K, 3500K, or 4000K.
Warranty	Warranty or limited warranty statement must cover at least a minimum of 24 months, or 2 years, from date of purchase based on no less than 3 hours per day of use.	A warranty must be provided for lamps, covering material repair or replacement for a minimum of three (3) years from the date of purchase.
Power Factor	≥ 0.5	For lamp power ≤ 5W and for low voltage lamps, no minimum power factor is required. For lamp power >5W, power factor must be ≥0.70 Note: Power factor must be measured at rated voltage.
CRI	An Average of the 10 samples tested must be greater than 80, and no more than 3 individual samples can have a CRI less than 77.	Minimum CRI (Ra) of 80.
