

Sales Quick Reference Guide

ENERGY STAR® Certified Homes Typically Include:

Complete Thermal Enclosure System

Comprehensive air sealing, properly installed insulation, and high-performance windows work together to enhance comfort, improve durability, reduce maintenance costs, and lower monthly utility bills

Complete Heating and Cooling System

High-efficiency systems are engineered and installed to deliver more comfort, better moisture control, improved indoor air quality, and quieter operation.

Complete Water Management System

A comprehensive package of best building practices and materials protects roofs, walls, and foundations from water damage and helps ensure durability and superior indoor air quality.

Energy-efficient Lighting and Appliances

ENERGY STAR certified lighting, appliances, and fans can be found throughout an ENERGY STAR certified home, helping to reduce monthly utility bills, while providing high-quality performance.

Third-party Verification

ENERGY STAR builder partners don't just claim that their homes are energy efficient; they back it up with independent inspections and testing by a Home Energy Rater.
