

Comments on Draft 1
Roland DG Corporation
05/01/08

Thank you for this opportunity for us to state our opinions about the standard value of OM Table 8 in Draft Version 1.1 "The ENERGY STAR Program Requirements for Imaging Equipment." In regard to the standard value of power consumption in sleep mode is quite severe. From technical view points, it is nearly impossible to meet that new standard, particularly for the larger-format printers. We strongly request to change the standard value from 13.5W to 17W. We wish your understanding and kind support on this matter. Should you have any inquiries or comments on our opinions, feel free to contact us.
