Subject: Energy Proposal

I'd like to highly recommend you adopt the 4 zone alternative which your own department says is the most energy efficient. In these uncertain times it is quite clear we need to adopt the most energy efficient alternatives at all times. To propose using a less energy efficient alternative seems irresponsible, especially from a department such as DOE.

Please make the right choice with the 4 zone proposal. To group New York and Phoenix in the same energy zone is simply not correct.

Thanks you.
