Subject: Proposed ENERGY STAR Windows Criteria

Wenco of Ohio (Jeld-Wen) has been involved with the ENERGY STAR Window Program for a long time. We have evaluated both suggestions and recommend the Three-Zone Alternative. The Four-Zone Alternative will make it more difficult to label and manufacture, track, train all parties involved including dealers and end customers.

The Three-Zone Alternative will make it much easier to train and control from a manufacturing standpoint. This will result in more consumers purchasing ENERGY STAR qualified windows and doors, which will result in a much higher National Energy Saving to our country.
