

## **American Dish Service Comments #2**

Rebecca,

We thought the efficiency requirements looked realistic with the exception of the 1.16 gallons per rack for single tank, door, low temp model. Since 1.16/rack is rare, if only achieved in one instance, the consumption rate considered more often as low for batch-type equipment is 1.2 per rack. Is there any chance of some discussion about this number before it goes to concrete?

Russ
