

**Proposal to Pilot Test a  
Home Performance with ENERGY STAR  
Contractor Partnership**  
December 5, 2008 DRAFT

**I. Introduction**

Home Performance with ENERGY STAR (HPwES) is a whole-house energy efficiency home improvement program promoted by the Environmental Protection Agency (EPA) and the Department of Energy (DOE) through partnership with over 27 local program sponsors across the United States (see Appendix A for a map showing where these programs are located). While specific local program details (such as incentive and contractor participation requirements) may vary, a common theme across all programs is that participating contractors agree to assess each home's energy performance using building science principles, and recommend the most cost-effective improvements to improve the home's energy performance as well as maintaining or improving the comfort, health and safety of its occupants and the home's long-term durability and value. More information about the program is available at [www.energystar.gov/homeperformance](http://www.energystar.gov/homeperformance).

**II. Expanding Home Performance Opportunities**

Currently, all HPwES programs rely on local sponsorship by utilities, state energy offices and other organizations that develop a network of participating contractors. These local HPwES sponsors' activities typically include contractor recruitment, training, mentoring and certification, marketing, third-party quality assurance and reporting, as well as offering incentives to participating homeowners and contractors who improve energy performance of homes. While there are various levels of effort depending on the geographical reach of the sponsor and the level of quality assurance required, EPA and DOE estimate that sponsors may need to invest \$15 million over a five year period to establish an effective program. In various regions of the U.S., sponsors have launched local HPwES programs to enable homeowners to improve their homes' energy performance, however it is not available everywhere.

Because programs have not been established in all markets, contractors are limited to participating only where a program exists and expansion of the program is limited by sponsors' resources to establish programs in new markets.

To address this problem and help reduce the cost of program implementation, the DOE and EPA plan to pilot a new approach that proposes a direct HPwES partnership with home performance contractors.

Under the proposed pilot, EPA and DOE will test the logistical and financial feasibility of partnering with home performance contractors. The purposes are to nationally define the standards and protocols for contractors to become an

HPwES partner, and create a sustainable quality assurance infrastructure, which will reduce the administrative cost for utilities, states and municipal governments to sponsor programs. Accomplishing these two goals will allow HPwES to expand to meet market demand instead of relying heavily on public funding.

This Contractor Partnership Pilot will also test the feasibility of transferring some of the roles of a Program Sponsor to other organizations. For example, the pilot will test the following roles and responsibilities:

#### The Role of DOE and EPA

- Pilot development and implementation
- Recruiting contractors, quality assurance providers and collaborating organizations
- Guiding all participants in the role they will play in the pilot
- Providing funding to stimulate some activities
- Consumer awareness campaign
- Pilot evaluation
- Issue certificates to homeowners (see Appendix B) that highlight the completed installations and improved energy performance

#### The Role of the Quality Assurance Provider

- Verification of contractor eligibility
- Verification of contractor quality management systems and practices
- Quality assurance oversight, including field inspections

#### The Role of the Training Provider

- Deliver contractor training
- Deliver contractor mentoring

#### The Role of the State and Local Governments

- Participate in consumer awareness campaign

#### The Role of the Participating Contractor Partners

- Offer customers a package of improvements that reduces energy use by at least 20%
- Perform whole-house energy efficiency improvements
- Marketing HPwES
- Report project information to EPA and DOE

#### The Role of Product Manufacturers and Retailers

- Contractor recruiting
- Contractor training
- Contractor mentoring
- Marketing HPwES

#### The Role of Utilities

- Consumer awareness campaign
- Financial incentives [optimal]
- Contractor training [optimal]

#### The Role of Financial Institutions

- Consumer financing (if available)

This document outlines the rationale and roadmap to pilot test a Contractor Partnership. It outlines steps necessary to recruit partners, monitor and verify work quality, market and sell a new service, and evaluate the results.

### **III. A Path to Accelerating Energy Efficient Home Improvements**

Under the proposed pilot a local program sponsor would not be required. Instead, contractors and home energy raters that meet national program eligibility requirements, will partner with ENERGY STAR to offer their customers Home Performance with ENERGY STAR – A package of energy efficient home improvements that can reduce total energy use by at least 20%. Local organizations (i.e. utilities, state and municipal agencies) will play an important role promoting HPwES through educational campaigns, marketing and financial incentives.

Under the proposed pilot, participating contractors and collaborating organizations, with assistance from DOE and EPA, will address many of the barriers that currently deter homeowners from investing in energy efficient home retrofits. For example,

- Contractors are trained to perform whole-house energy audits. To assist contractors, DOE will provide training and technician certification on a cost-shared basis. DOE will reimburse up to half of the cost of training and certification after 20 qualifying projects have been completed
- EPA will initiate a consumer education campaign to increase awareness of the value of HPwES and direct homeowners to a web site listing participating contractors. This will help homeowners find contractors that are skilled at completing quality energy efficiency retrofit projects.
- Participating contractors market and advertise their services and HPwES to homeowners. The contractors educate customers about the link between comfort and energy efficiency. An ENERGY STAR marketing tool kit will be available to participating contractors to use.

- Contractors will complete test-out procedures (i.e. air leakage and combustion flue draft tests) to help ensure that improvements are installed correctly.
- A third-party organization will verify each contractor's Quality Control procedures and review work performed by the contractors to monitor quality.

#### **IV. New Partnership To Improve American Homes**

To be eligible to participate in the pilot, contractors will be accredited by an independent third-party organization and participate in a quality assurance program that will verify that participating contractors:

- 1) are committed to performing services according to consensus-based building science standards and best practices;
- 2) are committed to quality management practices;
- 3) have \$1 million in general liability insurance;
- 4) have workers compensation insurance;
- 5) have registrations, licensing and/or bonding that is required by state or local government to conduct business;
- 6) and have practices for internal quality management.

The independent third-party organization will review the quality of service delivered by accredited contractors annually through on-site verification and customer feedback. Electronic systems will be established to minimize the burden of reporting information for quality reviews.

Certified Home Energy Raters are eligible to participate in the pilot as independent consultants. They can complete a Home Performance Assessment and test-out inspections. If they choose to perform home improvements they will need to be accredited according to the same procedures adopted for contractors.

Contractors and consultants will be invited to participate in the pilot during workshops that explain the benefits of home performance contracting. Manufacturers and distributors of residential building products and equipment will be asked to help promote these workshops to their customers.

General home improvement contractors, specialized trade contractors, remodelers, and home energy raters are likely participants. Participants will agree to the following terms, outlined in the Home Performance with ENERGY STAR Partnership Agreement (See Appendix C).

- 1) Provide homeowners with a Home Performance Assessment (HPA) summary report that meets HPwES guidelines. The summary report includes findings from the HPA and fuel-neutral recommended improvements (i.e. scope of work) that will save at least 20% on total energy use. (A Home Energy Rating

- or audit procedures approved for use by DOE's Weatherization Assistance Program can be used to estimate 20% reduction in total energy use.)
- 2) All home improvements must meet applicable state or local building codes and consensus based building science standards.
  - 3) Annually complete at least 20 HPAs **and** test-out inspections (requires that energy efficiency improvements were completed to homes) per HPwES guidelines during the 24-month pilot.
  - 4) Report information about all home improvement projects completed to EPA and DOE through a designated third-party quality assurance provider for the purpose of quality assurance review.
  - 5) Use the HPwES marketing graphic to promote a comprehensive, whole-house process for improving the energy efficiency of homes to prevent pollution, protect the environment, and save money on energy bills.
  - 6) Follow the HPwES Marketing Graphic Guidelines (available at [www.energystar.gov/marks](http://www.energystar.gov/marks)) and ensure that authorized representatives, such as advertising agencies also follow them.

Contractors and Home Energy Raters that participate in the pilot (i.e. sign a partnership agreement) will be considered ENERGY STAR Partners. Participating contractors and consultants can receive a Summary of Energy Improvements Certificate (Appendix B) when projects meet program guidelines to reduce energy use by at least 20%. Contractors will fax a "test-out" form to DOE and EPA for review. Each project that meets program requirements will be credited to the contractor on the program web site. The total number of projects that qualify will be listed next to each contractor's name.

### Pilot Market

Northern Virginia has been selected as the pilot market for this new Contractor Partnership. It is not currently served by an existing program sponsor, over 50% of homes in the region were built before 1980, and the median income of homeowners is among the highest in the country. DOE and EPA will work with local organizations to increase the marketing impact. In addition, EPA and DOE will work with local utilities to explore other activities that complement their energy efficiency programs, such as incentives or financing.

### Consumer Web Site

A consumer web site and tracking system will be developed to promote HPwES in the pilot market. The web site will be based on an ENERGY STAR template created for program sponsors. Consumer leads that come through the web site will be tracked for evaluation purposes.

## Example of Consumer Web Site

**HOME PERFORMANCE WITH ENERGY STAR** Colorado Home Performance with ENERGY STAR®

What makes Home Performance with ENERGY STAR different?

**Colorado Home Performance with ENERGY STAR - Advancing Home Energy Efficiency**

Common Recommendations

Home Performance with ENERGY STAR, sponsored locally by E-Star Colorado, offers a comprehensive approach to home improvement that provides comfort and both energy and cost savings for Colorado homeowners.

Typical Results

- Does your home have drafty windows and doors?
- Does your home have rooms that are too hot or too cold?
- Do you have high energy bills?

Get More Information

Information for Contractors

These are common issues faced by many homeowners in Colorado. Installing replacement windows, a new heating or air conditioning system, or adding more insulation may only fix part of the problem. But if you want an energy-efficient home, greater comfort, and lower utility bills, the way to address these problems is through a "whole-house approach."

**E-Star** Advancing Energy Efficiency in Housing

What is Home Performance with ENERGY STAR? | Why You Need It | What are the Results | Find a Contractor | Information for Contractors | Site Map | Contact Us | E-Star.com

The web site will include information about the benefits of HPwES, what the homeowner should expect, how to find a contractor, the responsibilities of the contractor and homeowner, and how disputes will be resolved. Any homeowner (or contractor) complaints received through the web site or ENERGY STAR hot line will be addressed following the process outlined in Appendix D.

### Consumer Awareness Campaign

HPwES will be a new service for the Pilot market. Although consumer awareness of ENERGY STAR may be high, awareness of a comprehensive home energy audit and home performance contracting will be low. Therefore, a homeowner awareness campaign will be necessary to introduce HPwES to homeowners.

EPA, with support from a marketing consultant, will prepare an advertising plan for the pilot market. The campaign will consist of two phases. The first phase will run approximately 3 months after the launch of the Pilot. The timing for the second phase has not been set. The first step in developing the plan will be to review market demographics and local media trends.

The plan may include a mix of the following advertising media:

- Print (newspaper & magazine – local and national),
- Radio (NPR, talk and leading stations – based on homeowner concentration,
- Online (Paid Search, SEO, web banners and buttons), and
- Limited TV (News, weather sponsorships).

Advertisements will likely be based on existing design templates in the Online Marketing Toolkit or used in past campaigns. Participating contractors will be

encouraged to use design templates in the Marketing Toolkit to create co-branded ads.

The plan developed for Northern Virginia is likely to be similar to a plan developed for the Maryland Home Performance with ENERGY STAR Program and running in Montgomery County April, May and June of 2008. Examples of the advertising media used in the Maryland Campaign are provided in Appendix H.

**Design Template Examples from Online Marketing Toolkit**

**Print Ads**

**Web Buttons**

**Pilot Evaluation**

Prior to launching the pilots, EPA will complete a baseline market assessment in each pilot market. This baseline assessment will document:

- The estimated number of contractors currently offering home performance contracting services,
- Utilities incentives for energy efficient home improvements,
- Examples of consumer marketing for services similar to HPwES,
- Other pertinent information that will help to establish a baseline to compare results from the pilot.

A preliminary evaluation of the pilot will be completed 12 months after the Pilot launch, and a final evaluation after 24 months. These evaluations will attempt to answer the following questions about the pilot:

**Marketing**

- Did consumer awareness increase during the pilot?
- What marketing tactics were most successful?

#### Financing

- How many consumers used financing products available through the pilot?
- What types of financing was most popular with consumers?

#### Energy Savings

- How much energy did the average consumer save as a result of HPwES?
- What were the most common improvements?

#### Consumer Motivation/Satisfaction

- Why did consumers choose HPwES?
- Were consumers satisfied with the service they received?

#### Program Design and Process

- Did the reporting and quality assurance process work as designed?
- How could the design of the pilot be improved?

#### Contractor Participation

- Why did some contractors choose to not participate?
- Did the contractors that participated think the pilot was successful?
- What would contractors that participated in the pilot like to see changed?

#### Pilot Schedule

The pilot is planned to begin May 1, 2009. It will run for 2 years until April 30, 2011.

#### **V. Invitation for Stakeholder Comments**

DOE and EPA invite stakeholders to comment on the proposed pilot outlined in this document by February 27, 2009. Comments should be sent via email or FAX to:

## ENERGY STAR Background Information

ENERGY STAR helps consumers, businesses, and public organizations protect the environment through superior energy efficiency. Home Performance with ENERGY STAR promotes a process of improving the energy efficiency of homes. The process is facilitated by a home performance professional that completes a whole-house energy audit, recommends improvements that will save at least 20% on total energy use, proposes a scope of work to complete the improvements and completes a test-out inspection after improvements have been installed. Energy savings are typically achieved through a combination of envelope upgrades, controlled air infiltration, upgraded heating and air conditioning systems, tight duct systems, upgraded water-heating equipment, high performance windows, and efficient lighting and appliances. Installed measures must be supervised by a home performance professional that is knowledgeable of applicable building codes and consensus-based building science standards. All participating contractors must be enrolled in a quality assurance program that meets Home Performance with ENERGY STAR criteria.

#### General Commitments for Home Performance with ENERGY STAR Contractor Partners

1. **Provide homeowners with a Home Performance Assessment (HPA) summary report that meets Home Performance with ENERGY STAR guidelines. The summary report includes findings from the HPA and fuel-neutral recommended improvements (i.e. scope of work) that will save at least 20% on total energy use. (A Home Energy Rating or audit procedures approved for use by DOE's Weatherization Assistance Program can be used to estimate 20% reduction in total energy use.)**
  2. **All home improvements must meet applicable state or local building codes and consensus-based building science standards.**
  3. **Complete at least 20 HPAs and test-out inspections (requires that energy efficiency improvements were completed to homes) annually that meet Home Performance with ENERGY STAR guidelines during the pilot.**
  4. **Report information about all home improvement projects completed to EPA through a designated third-party quality assurance provider for the purpose of quality assurance review.**
  5. **Use the Home Performance with ENERGY STAR marketing graphic to promote a comprehensive, whole-house process for improving the energy efficiency of homes to prevent pollution, protect the environment, and save money on energy bills.**
  6. **Follow the Home Performance with ENERGY STAR Marketing Graphic Guidelines (available at [www.energystar.gov/marks](http://www.energystar.gov/marks)) and ensure that authorized representatives, such as advertising agencies also follow them.**
- 

#### ENERGY STAR Commitments to Partners

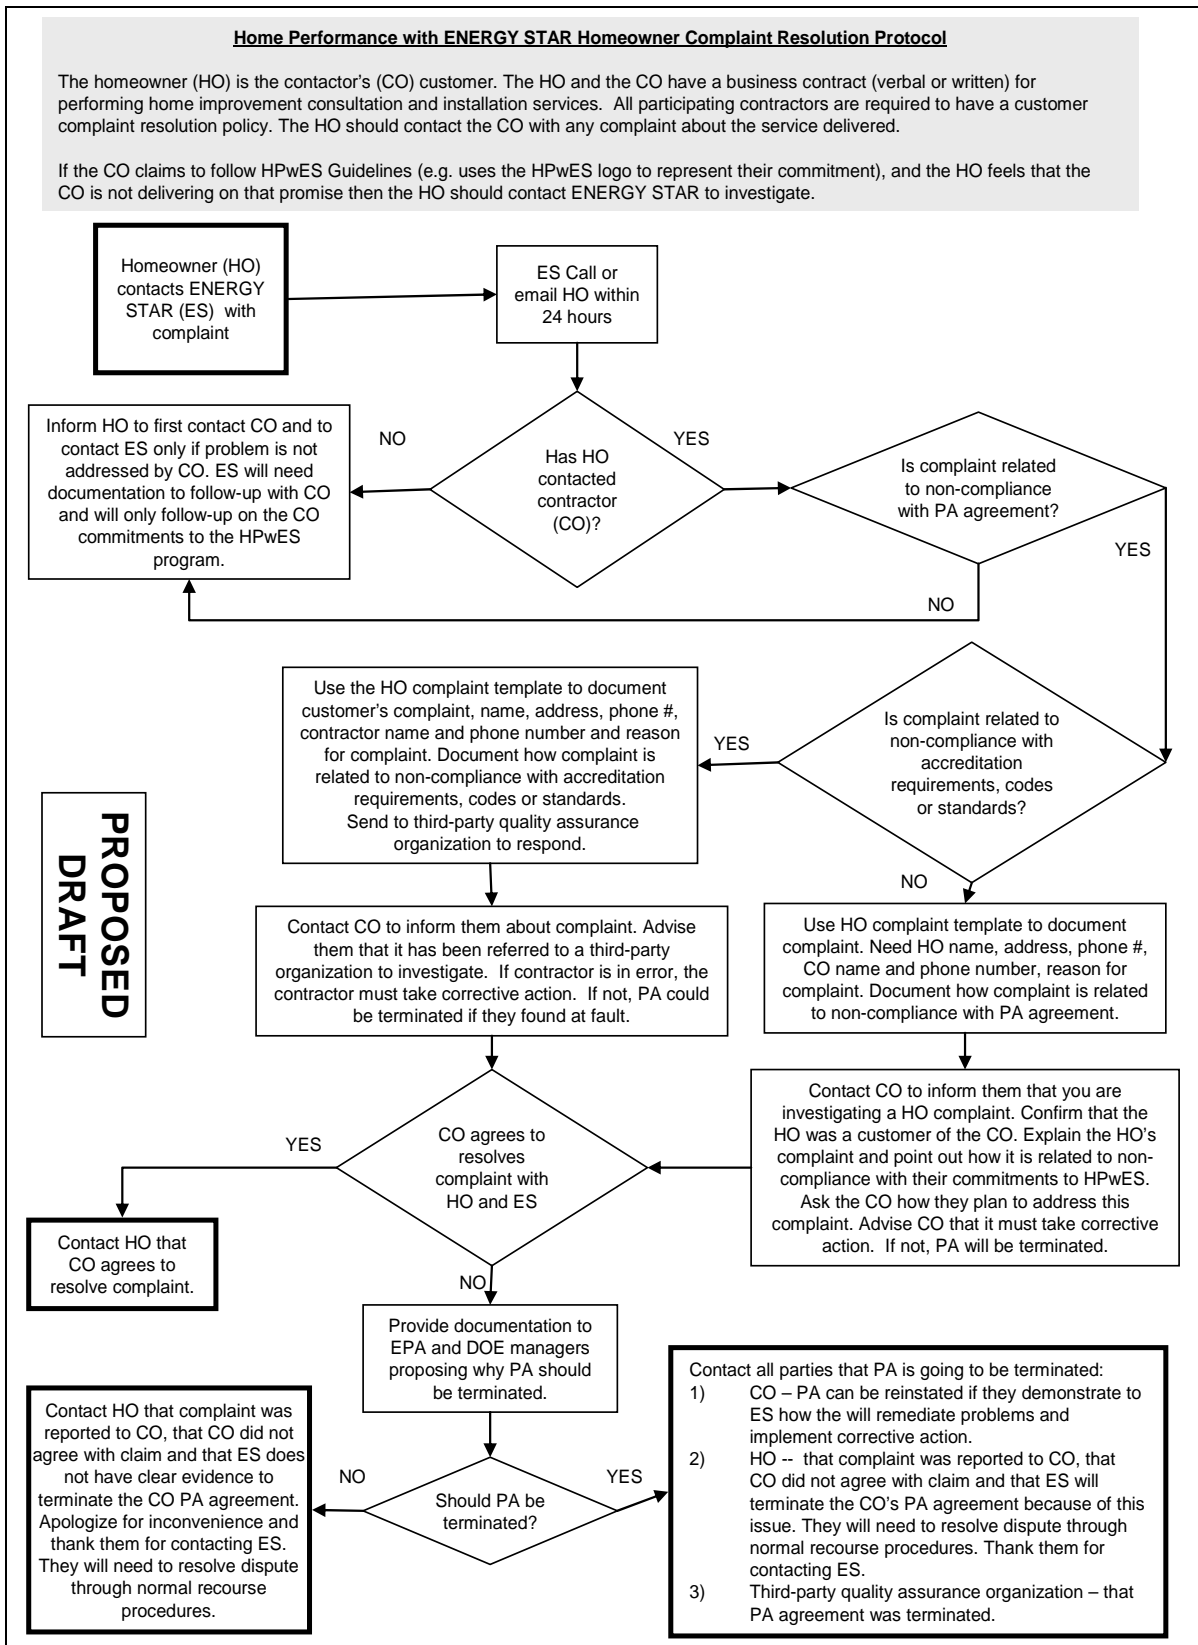

1. Increase awareness of Home Performance with ENERGY STAR by distributing key messages on the benefits of a whole-house approach to improving energy efficiency.
  2. Provide current Home Performance with ENERGY STAR news, information, and reference documents (via the ENERGY STAR Web site, e-mail or other means).
  3. Respond swiftly to requests for information or clarification on Home Performance with ENERGY STAR policies.
- 

#### General Terms and Disclaimers

1. The partner will not construe, claim or imply that its participation in Home Performance with ENERGY STAR constitutes federal government approval, acceptance, or endorsement of anything other than the partner's commitment to Home Performance with ENERGY STAR. Partnership does not constitute federal government endorsement of the partner or its services.
  2. The partner understands that the activities it undertakes in connection with Home Performance with ENERGY STAR are voluntary and not intended to provide services to the federal government. As such, the partner will not submit a claim for compensation to any federal agency.
  3. The partner and ENERGY STAR will assume good faith as a general principle for resolving conflict and will seek to resolve all matters informally, so as to preserve maximum public confidence in ENERGY STAR.
  4. This agreement is voluntary and can be terminated by either party at any time or any reason, with no penalty.
  5. Failure to comply with any of the terms of this partnership agreement can result in its termination and cessation of access to the benefits of Home Performance with ENERGY STAR, including use of the marketing graphic.
  6. ENERGY STAR will actively pursue resolution of noncompliance related to the use of the Home Performance with ENERGY STAR marketing graphic.
  7. **For pilot testing purposes this agreement will terminate on April 30, 2011 and is limited to the metro area served that is designated in this agreement.**
