Dear Most Efficient,

Refrigerators without freezers consume less energy than refrigerators/freezers. If a home owner does not need a freezer they will maximize their energy savings by purchasing a refrigerator only. The two lowest dots on your graph showing energy use of an array of refrigerators are our refrigerator only models. "Figure 1 in Energy Star Program Requirements"

The "Most Efficient" appliances category is a natural spot for a refrigerator only. I suggest they are added to the Most Efficient list.

Sincerely,

Larry Schlusser
