

Energy Efficiency and Electric Infrastructure in the State of Alabama

The simple
choice for
energy
efficiency.

In any given state, there are a range of stakeholders well-positioned to contribute to the design and delivery of effective energy efficiency programming. This factsheet provides an overview of relevant entities in the state of Alabama, along with highlights of state policies and practices related to energy efficiency. The entity types described and highlighted below are typically involved in electricity and/or energy efficiency related matters in states. Other important stakeholders such as trade associations, industry, and local businesses are not included as they vary significantly from state to state.

Electric Market Overview

Electric Utilities

Privately- and publicly-owned electric utilities generate, transmit, distribute, and/or sell electricity primarily for use by the public. These include investor-owned electric utilities, municipal and state utilities, Federal electric utilities, and rural electric cooperatives.¹ The following summarizes electric utilities in Alabama by type:

- *Investor-Owned Electric Utilities:*
Alabama Power Company (Southern Company): <http://www.alabamapower.com>
- *Municipally-Owned/ Publicly-Owned Utilities:* Alabama has 26 municipally- or publicly-owned electric systems in the state, which are included in the following list available through the Arkansas Energy Office:
<http://www.dleg.state.mi.us/mpsc/electric/address.htm#MunicipalUtilities>
- *Member-Owned (Electric Cooperative):* Alabama has 23 electric cooperatives.
<http://www.dleg.state.mi.us/mpsc/electric/address.htm#CooperativeUtilities>
- *Other:* 1 Municipal Marketing Authority²
- *Tennessee Valley Authority in Alabama:* <https://www.tva.com/About-TVA/TVA-in-Alabama>

Electric utility service areas (as available):

TVA service map: <https://www.tva.gov/Energy/Our-Customers>

Status of Electric Industry Restructuring

Vertically integrated utilities are responsible for generation, transmission and distribution of power to customers. In the 1990's, many states began to unbundle the electricity supply and distribution functions of investor-owned utilities on the theory that only the wires (the fixed network system) constituted a natural monopoly, while the generation of power did not. In states that have undergone restructuring, individual retail customers can choose their supplier but still receive delivery over the power lines of the local utility.³

- Alabama does not have a restructured electric industry. <http://www.eia.gov/electricity/policies/restructuring/alabama.html>

Regional Transmission Organization (RTO)/Independent System Operator(ISO)

About 60% of U.S. electric power supply is managed by RTOs or ISOs: independent, membership-based organizations that ensure reliability and usually manage the regional electric supply market for wholesale electric power. In the rest of the country, electricity systems are operated by individual utilities or utility holding companies. RTOs/ISOs engage in long-term planning that involves identifying effective, cost-efficient ways to ensure grid reliability and system-wide benefits. Coordination and cooperation between utilities, state PUCs and RTOs/ISOs is often required to advance energy efficiency goals.⁴

- Alabama is not a RTO or ISO member.

Utility Oversight and Planning

Utility Oversight

Public utility commissions (PUCs) oversee goals, investments, and ratemaking for investor-owned electric utilities. Most of this oversight is conducted via specific regulatory proceedings. Municipally-owned utilities are governed by a local city council or an elected commission, and member-owned/cooperative utilities are governed by a board elected by members. In a few states, PUCs have oversight over some aspects of municipally and member-owned utility performance such as energy efficiency resource standards.⁵

- Alabama Public Service Commission's Utility Services Division has responsibility for regulation of natural gas utilities; wireline telecommunications, private water, and private waste water utilities. Additionally, the Division receives and responds to consumer inquiries for customers of Alabama Power, the natural gas utilities, telecommunication providers, Inmate Calling Service providers, privately-owned water companies and privately owned waste water companies.

Integrated Resource/Procurement Planning

Integrated resource plans (IRPs) are utility plans for meeting forecasted annual peak and energy demand through a portfolio of supply-side and demand-side resources over a specified future period. As of early 2015, integrated resource planning is required or present in more than 30 states, including most vertically integrated/non restructured states. In states that are restructured, regulated distribution only utilities may be required to develop procurement plans to service customers that do not choose a competitive retail supplier. Energy efficiency is considered as a demand-side resource but the degree to which it is included in resource/procurement planning is influenced by other factors including policies such as energy efficiency resource standards or requirements that all cost effective energy efficiency be considered.⁶

- TVA's most recent IRP 2015: <https://www.tva.gov/Environment/Environmental-Stewardship/Integrated-Resource-Plan/2015-Integrated-Resource-Plan>

Statewide Planning Process

States sometimes undertake executive or legislatively driven statewide energy planning processes. These plans may be completely independent of utilities or may explicitly engage utilities.

Energy Efficiency Potential Studies

Energy efficiency potential studies determine the amount of technical, economic, and achievable potential for energy efficiency in a region, state, or utility service territory. Energy efficiency potential studies may be undertaken by state agencies or energy efficiency advocacy organizations, or by utilities as part of or to inform compliance with a regulatory requirement. The following are recent energy efficiency potential studies:

Energy Efficiency Policies/Activities

Statewide Clean Energy Policy/Energy Efficiency Energy Resource Standard(s)

Energy efficiency resource standards (EERSs) require obligated parties—usually regulated retail distributors of electricity—to meet a specific portion of their electricity demand through energy efficiency. As of March 2015, 27 states have some type of energy efficiency requirement or goal.⁷

- Alabama does not have a mandatory energy efficiency resource standard.

Current Utility-Administered Energy Efficiency Programs

Energy efficiency is regarded as an important utility resource with co-benefits that include reducing air pollution, saving customers on utility bills, and creating local jobs. While the majority of large-scale energy efficiency programs are funded by utility ratepayers, program administration may be by the utility, the state, an independently awarded program administrator or a combination of entities. Below are available links related to ratepayer-funded energy efficiency programs offered in the state⁸:

- *Program Administrator:* Alabama Power (Southern Company): http://www.alabamapower.com/residential/save-money-energy/home.asp?nav=top_res_sme and <http://www.alabamapower.com/business/save-money-energy/home.asp>
Most recent program filing: N/A. Alabama Power publicly submits an annual report: <http://www.alabamapower.com/about-us/pdf/APC%202014%20ANNUAL%20REPORT.pdf>
ENERGY STAR Partner since 2000
- *Program Administrator:* TVA: <https://www.energyright.com/For-Business-%2B-Industry> and <https://www.energyright.com/For-Your-Home/Rebated-Upgrades>
Most recent program filing: N/A
ENERGY STAR Partner since 2004
- *Program Administrator:* Central Alabama Electric Cooperative: <http://caec.coop/member-benefits-services/heat-pumps/>
Most recent program filing: N/A
- *Program Administrator:* South Alabama Electric Cooperative: <https://www.southaec.com/content.cfm?id=2014>
Most recent program filing: N/A

Other Key Stakeholders

State Air Office:

Consumer Advocate(s)

Most states also have one or more consumer advocacy organizations. Consumer Advocates are often concerned with maintaining low rates and ensuring equitable treatment of all customer classes.⁹

- State of Alabama Office of the Attorney General: <http://www.ago.state.al.us/>

Others Public Interest Groups

Groups representing environmental and other public interests are often involved in providing public input or technical expertise during regulatory proceedings or stakeholder processes. The following energy efficiency organizations/nonprofits are active in the state or region:

- Southeast Energy Efficiency Alliance (SEEA): <http://www.seealliance.org/>
- Southern Environmental Law Center: <https://www.southernenvironment.org/>
- Alabama Public Utilities Alliance: <http://www.apua.us/>
- Alabama Rural Electric Association: <http://areapower.coop/>
- Alabama Environmental Council: <http://www.aeconline.org/>
- Southern Alliance for Clean Energy: <http://www.cleanenergy.org/>
- Alabama Center for Sustainable Energy: <http://alcse.org/>

ENERGY STAR is the simple choice for energy efficiency. For more than 20 years, EPA's ENERGY STAR program has been America's resource for saving energy and protecting the environment. Join the millions making a difference at energystar.gov
