EPA/ITI Workshop on Enabling Energy Efficient Systems

June 26, 2014

Workshop Summary
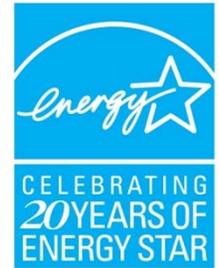

- Progress on definitions for intelligent system efficiency
- Agreement to develop both value proposition for and models for implementing system efficiency.
- Interest in developing case studies for use with facility operators and policy makers; also a potential data source for metrics work.
- Interest in determining ways to verify savings claims from IT efficiency providers (like with ES Power Mgmt campaign)
- Interest in engaging EM&V from utilities to ensure their interests are met and thus incentives can be offered
- Metrics require much more discussion (interest in testing some smaller systems and using the learnings to inform metric development).

Next Steps

- Update website and create opt-in/opt-out list serve

- Schedule a series of quarterly conference calls to:

  – Organize project leads, volunteers and methods for vetting and sharing our work

  – Further the outcomes of the workshop, and

  – Status progress

- First call is tentatively planned for Tuesday September 30th, 2–4 pm EDT
