Dear HRV/ERV Manufacturer or other interested stakeholder:

Natural Resources Canada (NRCan) is seeking your comments regarding the draft ENERGY STAR® specification for packaged heat/energy recovery ventilators that are primarily used in residential installations. Based on analysis of HVI certified test data, slightly more than 30% of the currently listed base-model HRV/ERVs would already comply with the performance requirements in the draft Specification 1.0 for at least one test air flow.

The exchange of ideas and information on this specification is critical to ensure it moves forward. As such, you are strongly encouraged to review the attached material and provide your comments to NRCan. We have set up an email address to which you can provide your comments electronically. Please send your comments by January 12, 2009 to the following email address: ***ESTARHRV@gmail.com***. All comments should be considered public unless the submitter requests that his/her comments remain confidential.

Thank you for taking the time to provide your input. We look forward to working with you to finalize the specification. Please feel free to contact me directly with any questions or concerns at 613-947-8764 or by email at: bkillins@nrcan.gc.ca.

Sincerely,

Brian Killins
Senior Standards Engineer
Office of Energy Efficiency
