Dear Ms. Robin Clark,

As for the minimum Average Efficiency requirements, we have some suggestions as below.

- 1) Reducing the flat line limit from 0.87 to **0.86** for above 36Watts.
- 2) Reducing the limit from $(0.08 * \ln(P_{no})) + 0.585$ to $(0.08 * \ln(P_{no})) + 0.565$ for over 1 to 36watts.

General speaking, ITE (Information Technology Equipment) is easy to meet Draft 1 Version 2.0 requirements if the o/p voltage of EPS is over 15Vdc. Unfortunately, there are a lot of other appliances can not meet Version 2.0 requirements due to the o/p voltage of adapters is less than 15VDC. That's the reason why we suggest EPA to reduce the limit.
