Subject: blu ray player power use

---

All,

Just wanted to make sure everyone is aware of the spread of power consumed by Blu-Ray players when on. The typical power use is around 25w. Panasonic displayed a Blu Ray player that used just under 10W.

While most of the focus has been on making sure these devices do go to sleep/standby when not in use, we think it makes sense to also include on mode levels to any potential spec.

Let me know if you want to discuss further.

noah
