

Subject: Water Flow Rate for Combo All in One washers

Amanda,

Here is a comment that I have on the draft 1 Version 6.0 Clothes Washer Specification for Combo Washer Dryers. As I discussed to you yesterday, the flow rate of water during the water fill portion of the washing cycle is significantly different than the water used during the drying portion. Therefore, the flow meter will need to meet the accuracy at both of these flow rates. Some meters have very good accuracy in the area of the water fill, but do not have the accuracy for the very slow flow during the drying portion. So there may be new equipment needed for conducting this testing.

Let me know if you have any questions on this.

Thank you.
