hi richard , my name is george carrier and i wrote to you before and I wanted to clear something , the main reason i wrote to you in the first place ,i feel so strong about DOE Energy Star program @ poulin aluminum and vinyl prod.to recommend adoption of the four-zone proposal. The three-zone proposal is disastous to our marketplace and to end consumer. We need an adoption of the four-zone proposal to benefit the economy,the environmentand the energy markit.

WE DO NEED FULL SUPPORT FOR THE FOUR-ZONE PROPOSAL to ensure that the DOE does the right thing.

any question,please call me @ 1/802/476/4368

thanky for your attenion to this,

george carrier
poulin alumunim

hi, my name is George carrier & i own a window Co. what i under stand that you the government thinning about changing the three to a four-zone, at this point it's a start .and a good thing.

i think some other problems are that other manufactures are selling windows that don't work around in areas like Vermont. for instance Harvey Ind. sells there windows and you know that there windows arn't made for the northern climates (there made the central or southern parts of the country) but the manufactures know as well as indignant companies like our local handy mans. the right window for our area is a window like Galaxy it's made for our area, why i#pilkington glass that's has a hard coat, we sell triple glaze double strength glass, double krypton gas filled.

2# the other window CO. Harvey uses PPG glass with Solarban-60 Low e there co. tells there sales men and companies they sell to, its the best thing in windows, so they lie to the home owner as such when in fact this glass should not be in there windows i think that the government should be going to a common séance approach.to brake down window in class.

class1 single glaze

class 2 double glaze

class 3 double glaze

class 4 double glaze with low-e

class 5 double glaze w/low-e and argon gas

and so on so the consumer will under stand it better .and i have one more thing so say why douse a mnafactur say in print that" Uganda r-Values are subject to change without notice." if there insulation value is so good then this gets them off the hook when things go wrong. if you would like to talk to me you can call me

@1/802/476/4368 thank you
