

## Join EPA in protecting the climate.

ENERGY STAR® qualified products and practices help you save energy, save money, and protect the environment.

### Computer/Monitor

Enable power management features on your home computer and monitor or laptop. And look for the ENERGY STAR when purchasing products for your home office. They use less energy without sacrificing quality or performance. Also, look for laptops, which use less energy than desktop computers.

### Multi-Function Device

Save energy and space with an ENERGY STAR qualified multi-function device that combines several capabilities (print, fax, copy, scan). Make sure power management features are enabled for additional savings.

### Power Strip

Use a power strip as a central "turn off" point when you are done using equipment. It allows you to completely disconnect the power supply from the power source, eliminating standby power consumption.

### Electrical Outlet

Seal any holes around your outlets with an inexpensive outlet gasket.

### Bring Your Green to Work

Combining small changes in your home office with bigger changes at your workplace saves energy and reduces carbon emissions.
