

Join EPA in protecting the climate.

ENERGY STAR® qualified products and practices help you save energy, save money, and protect the environment.

Laptop

Even computers need to sleep! To save energy, turn off your monitor if you aren't coming back for 20 minutes. Ask your parents to help you set the ENERGY STAR power management features.

Light Switch

Your room is not afraid of the dark. Always turn off lights when you leave. And use light fixtures and light bulbs that have earned the ENERGY STAR.

Battery Charger

When your cell phone and other electronics are finished charging, unplug the charger from the wall. The charger wastes energy even when nothing is plugged in to it.

Window

That howl you hear is not a monster...that is air blowing through a crack around your window. If you hear this noise and feel a draft near your window, be sure to tell your parents. They will likely need to caulk and use weather stripping around your window to make sure no air is coming in or going out. When replacing your windows, choose models that have earned the ENERGY STAR.

Sound System

Hey, rock star! Don't forget to turn off your music and other electronics when you leave the room.
