Global Warming and YOU:
What You Can Do at HOME

energystar.gov

6 Tips To Try At Home!

1. Reduce, Reuse, and Recycle

Reduce the waste and the water you use.
Reuse all those bags and stuff you can choose.
Recycle thing-a-ma-bobs, papers, bottles and such.
Join the team to save the world that we love so much.

2. Use Green Power

Choose to use energy made by the wind and the sun.
It's renewable green power that can make your home run.
Power like this doesn't hurt our climate at all.
Just modify your house to catch it or, for help, give us a call.

3. Change Your Lights

Change out 5 light bulbs to ENERGY STAR ones,
you'll fight global warming and save 65 dollars in funds.
They use 75% less energy than the standard light,
and last up to 10 times longer brightly illuminating the night.

4. Use ENERGY STAR Products

When buying new products for your work and your house,
look for ENERGY STAR labels and reduce air pollution to the size of a mouse.
Even brand new houses feature the ENERGY STAR label,
it will save greenhouse emissions, pollution and even cash if you're able.

5. Heat and Cool Efficiently

Lots of energy is used to heat and cool your home,
so insulate your attic and seal up air leaks with foam.
Tune up all your equipment in the spring and the fall,
so when your energy bill comes it will be nice and small.

6. Calculate Your Household's Carbon Footprint

By using the EPA's greenhouse gas emissions calculator,
you can learn about how to make your conservation greater.
Reducing your emissions and learning all new ways,
to keep the earth clean and bright for the rest of its days.
