| Demand Response Summary: | This connected thermostat is enabled to respond to Demand Response (DR) events that utilities call to mitigate certain risks to the grid. These programs ultimately save consumers money while preventing adverse effects on their service. This thermostat utilizes a variety of optimization/DR firms that access our thermostats through APIs. Similarly, our thermostats can be controlled by multiple Demand Response Management Systems (DRMS) systems shedding load at peak periods. Features include pre-cooling and various shed strategies (cycling, temperature off-set, etc.). The app allows for consumers to be alerted of events and offer the ability to opt out should the need occur. Feedback on an event opt-outs, overrides and load shed performance are available through API to the Load Managing Entity. |
