

ENERGY STAR® RESIDENTIAL NEW CONSTRUCTION PROGRAMS

Dear ENERGY STAR Residential New Construction Stakeholder,

As you may know, one key requirement of the ENERGY STAR Single-Family New Homes National Program Requirements, Version 3.2, is that a home must have a thermal enclosure that meets or exceeds the 2021 International Energy Conservation Code.

To help Raters and builders who are assessing National v3.2, the EPA is hosting a webinar to highlight how efficient windows, such as those certified to the ENERGY STAR Residential Windows, Doors, and Skylights Specification, can be used to help meet the thermal backstop. Hear from EPA's expert on the performance and construction of modern efficient windows, their relative cost, how to identify certified products, and general considerations for incorporating efficient windows into new homes. While attendance is optional, it will contain a wealth of information you won't want to miss.

Using ENERGY STAR Windows to Help Meet ENERGY STAR Single-Family New Homes, National v3.2

Tuesday, June 25th, at 1:00 pm ET
