RE: ENERGY STAR Clothes Dryer Specification: Added definition

Please accept these comments on behalf of the American Council for an Energy Efficient Economy (ACEEE) on the proposed addition of a definition for clothes dryers with a supplementary drying system to the ENERGY STAR Clothes Dryer Specification. ACEEE supports EPA's decision to include high-efficiency clothes dryers with supplementary drying systems to the ENERGY STAR program with the defined limit to the supplementary system input power of 15% of the primary dryer's input power.

We appreciate the opportunity to comment on this issue and on the development of ENERGY STAR specifications for this product and the wide range of product categories covered under the ENERGY STAR brand. We value the work that EPA has done to showcase high performing products in a number of product categories.

Thank you for the opportunity to provide comments.

Sincerely,

Jennifer Amann
Buildings Program Director
