ENERGY STAR® and Air Sealing Products: New Program Requirements

Doug Anderson, US EPA
Anderson.Doug@epa.gov
Agenda

• Goals of the Call
• Program History
• Current approach to Air Sealing Products
• Issues
• New approach to Air Sealing Products
• Timing
• Questions
Goals of this Call

- Explain challenges with promoting air sealing products
- Explain how ENERGY STAR (ES) promotes sealing air leaks in homes
- Inform stakeholders on the planned changes

EPA’s Objective...

- Change the ES logo use requirements for all air sealing product manufacturers
- Listen to suggestions from industry and interested parties regarding these changes
Seal and Insulate with ENERGY STAR

Program History

• **1996** – EPA created a labeling program to “promote” insulation – “ENERGY STAR Insulation”

• **2003** – EPA changed the program name and logo to “ENERGY STAR Home Sealing” and allowed some air sealing product manufacturers to promote program on marketing materials (but never on the product or packaging)

• **2007** – EPA changed the program name and logo to “Seal and Insulate with ENERGY STAR”

Current logo approved for use on marketing materials for air sealing products with EPA approval
EPA provides educational information and detailed guidance on:

- The benefits of reducing air leaks in the home
- Where to find common air leaks in the home
- How to air seal in a home
- Products (general types) commonly used to air seal

EPA incorporates quality installation requirements for proper air sealing into the ES Homes Program and Home Performance with ES.

The ES Program will continue to promote air sealing as a cornerstone of home energy efficiency — but this does not require a label on a product.
**ES Promotion of Air Sealing: Current Approach**

**Goal:** To get more homeowners and pros to air seal homes (correctly)

**Strategy:** Create ES platform to communicate opportunities and reduce barriers to take action

**Platform:** ES “Seal and Insulate” promotional logo

**Channels:**
- ES Outreach – ES Home Improvement messaging
- Retailers – Signage, web, catalogs, seasonal materials,
  - Tie products together under a unifying message
- Manufacturers – marketing materials, web
- Utilities – Consumer information
Air Sealing products for homes are not labeled by ENERGY STAR. Why?

- Products may or may not reduce air leakage every time
  - Installation, situation, and application dependant
  - What is the main purpose of the product?
- Cannot assign energy savings to individual products
  - Too many variables and highly behavior dependant
- Actual performance is measured after installation
  - Blower door test (2009 IECC Section 402.4)
- A combination of products deliver a high performance envelope
ES Promotion of Air Sealing: Current Participation Requirements

• Manufacturers and retailers allowed to use the “Seal and Insulate with ES” mark on promotional materials
  – Such as: retail displays or signs, ads, brochures, technical sheets, installation instructions, and web sites

• Products main purpose (and marketed purpose) must be to reduce air leaks

• E-mail agreement - No required standard written agreement for logo use

• “Seal and Insulate with ES” mark can never appear on air sealing products or product packaging

• Each manufacturer use of “Seal and Insulate with ES” mark must be approved by EPA or designated support staff
  – Retailers have been given specific guidelines
Seal and Insulate with ENERGY STAR
Current Approved Mark

No other ES logo or mark is approved by EPA for use on marketing materials to promote air sealing.
ES Promotion of Air Sealing: Current Participation Requirements

ES has allowed manufacturers of these products to use the “Seal and Insulate with ES” logo on promotional materials:

- Elastomeric caulk
- Spray foam in-a-can
  - One and two component (low pressure) foam
- Weather stripping and sealing door thresholds
- Attic hatch, fan, and recessed light covers
- House wrap, sealing tapes, and sill sealers
- Sealed electrical boxes and outlet gaskets
- Shrink-to-fit window film
ES Promotion of Air Sealing: Current Participation Requirements

ES has **NOT** allowed manufacturers of these products to use the “**Seal and Insulate with ES**” mark since the products do not seal or they do not fit the program definition:

- Vents
- Insulation clips, straps, supports, baffles, or wires
- Products not specifically marketed as air leakage reducers
- Products not specifically marketed as residential applications
- Moisture or vapor barriers (only)
- Duct sealants (that may change)
ES Promotion of Air Sealing: Problems and Issues

Currently:

• Misleading use of ES mark on marketing materials
  – Logo used to imply qualification or certification of products
  – Logo appears in ads tied to specific products

• Lack of consumer or contractor information on air sealing
  – Need for detailed installation instructions for consumers
  – Dispel myths – “the house has to breath”
  – Encourage building science approach - “Seal tight, ventilate right”

• Misleading, exaggerated, or undocumented energy saving claims – i.e. “improves indoor air quality”
ES Promotion of Air Sealing: New Requirements to be Implemented

• All manufacturers required to sign user agreement laying out the conditions of logo use
  – Protect the brand and clarify limited use
  – Establish list of outreach participants

• Limit use of S&I graphic to 3 applications:
  – 1) Retailer signs and displays
  – 2) Web site with logo in a syndicated content box
  – 3) Instructional materials explaining air sealing concepts and/or instructions with logo in a content box

• Manufacturer must have web site with instructions

• No ES logos or graphics on air sealing products or packaging
ES Promotion of Air Sealing: New Requirements

Manufacturers will no longer be able to use the S&I logo for these applications:

- Product or company ads
- Next to products in catalogs or on the web
- Spec or technical sheets
- Product samples
- Product-only focused brochures or sell sheets
- Any application that implies product qualification or that the product has met some specification
ES Promotion of Air Sealing: Syndicated Content

Promote in a campaign style approach

@Home Tool
This interactive tool provides a fun and easy way to learn about energy efficiency in your home. Go through a typical home, room by room, and find easy ways you can be more energy efficient.

Save BIG with ENERGY STAR®
We are committed to helping you, your family, and your community save money and energy while protecting the environment for future generations. We offer a wide range of quality ENERGY STAR® products as well as tips and advice on simple ways you can save energy, money and help the environment, all while making your home more comfortable. "Energy Star™: a name you can trust for quality and service and now your partner in a healthier environment for future generations."

30% ENERGY TAX CREDIT
Are you planning to purchase ENERGY STAR® rated products, or did you already purchase ENERGY STAR® products to improve the energy efficiency of your home? No matter what the case, you still can qualify for up to 30% in energy tax credit. But hurry, tax credit for most products is only available until December 31, 2018.

Consumption Less with Your Consumer Electronics:
Did you know that the consumer electronics in your home are responsible for 15% of your home’s electricity use? And this number is growing. In fact, the average home has two TVs, a home theater system, a Blu-Ray or DVD player, and a set top box. By replacing each of these with an ENERGY STAR® model, a household can save nearly $200 in energy costs over the lifetime of these products.

EPA
ES Promotion of Air Sealing: Manufacturer next steps

1) When it becomes available, review, sign and submit logo use agreement (we will send)
2) Update materials and web to comply with new requirements
3) Update web site using new materials
4) Submit new materials to EPA for review and approval
5) Complete changes within 6 months of receiving agreement
Summary (highlights)

- EPA is changing the logo use requirements for promoting “Seal and Insulate with ENERGY STAR”
- EPA will require that users sign a logo use agreement
- EPA will limit use of the logo to retail signage, web site, and air sealing instructions
- EPA seeks to have these changes in place in 6 months
Questions and suggestions

EPA will take written questions and suggestions on these plans as they relate to air sealing products.

insulation@energystar.gov
Next Steps

• Please submit questions and suggestions by November 10, 2010
  – Please send to Insulation@energystar.gov
• Place a response to questions and suggestions on line by December 1, 2010
• Finalize user agreement and send to current users – December 2010
• Send notices of logo use violation – June 2011
