Subject: Sunsetting of ENERGY STAR

To Whom It May Concern,

As an industry specialist involved with both Energy Star products and non- Energy Star products I am in favor of sunsetting this designation.

It is misleading to the consumer who does not necessarily understand how a reflective roof color may negatively, positively or have little to no impact on their building's energy consumption. It further does harm to the true building's energy science as it minimizes the effects of insulation in the roof system.

I welcome this long awaited review of an outdated product designation.

Best Regards,

Austin Eells
