

To whom it my concern,

My name is Johnson Choo and I am the regulatory and environment senior manager at LG Electronics USA, Inc. EPA proposed recognition criteria across 12 product categories for 2017 on August 5<sup>th</sup>. I reviewed the proposal of Recognition Criteria Ductless Split Air Conditioners and Heat Pumps and I found that one criteria below was added. I want to know what document we need to provide for your review in order to prove this criteria. Do you have any examples for this? Please advise me.

**"3) Products must be able to provide cooling (and heating if applicable) at two or more capacity levels."**

Best Regards,

**Johnson Choo**

**Subject:** Question regarding display criteria

Dear ENERGY STAR,

Would you please explain how I can calculate over 5.0 megapixel product?  
I am not fully understand following method.

Products with >5.0 megapixels Total Native Resolution can receive a maximum  
r of 30.65 kilowatt-hours.

Thank you.
