**RE: ENERGY STAR Specification for Televisions, Version 8.0**

Dear Ms. Radulovic:

The U.S. Environmental Protection Agency (EPA) recently launched the development process for ENERGY STAR for Televisions Version 8.0 specification. This letter is written in response to the request for input to the new draft specification. It is submitted on behalf of the Northwest Energy Efficiency Alliance (NEEA).

NEEA plans to participate in the full process of arriving at a new Television Version 8.0 specification and in support of developing the draft submits the two following documents as reference.

- *Emerging Television Trends Memo, NEEA, Oct 2016*
- *Revising the TV Energy Use Test Procedure, NEEA, Nov 2016*

NEEA believes these documents provide important research results related to many of the topics of interest in developing the new specification.

It is our understanding that other parties providing comments as part of this process are referencing one or both of the documents, therefore we wanted to make them available to you. Please note: Neither of the reference documents has been published to-date so NEEA asks that you do not distribute them beyond use as reference in developing the Television Version 8.0 specification. NEEA does plan to publish both by the end of 2016, at which point they will become public documents.

We look forward to ongoing collaboration on this specification.

Respectfully,

A handwritten signature in black ink, appearing to read "Nick Leritz", written over a horizontal line.
