**Subject:** decline of increasing the ES standard for Inline fan too fast

Dear sir/madam,

We hope to decline of increasing the ES standard for Inline fan too fast.

That will cost too much sources to keep updating shortly. And it will raise up the production cost. Therefore, customers will need to pay much more for the products.

That may affect the industry. Many manufacturers will be effect of growing, since the ES Standard increase too fast. These companies will never catch up the ES standard line, if the ES standard line keep increasing too fast. That's because it needs a lot of time, money and sources on R&D. Please care about the whole industry instead of just caring the few big companies.

Best regards,

Jun Tan
