

To whom it may concern,

Reading through the 2016 proposed recognition criteria for Central Air Conditioners, Heat Pumps, and Geothermal Heat Pumps, I have a suggestion for the introduction of section 3 regarding unit messaging capabilities.

The current introduction to section 3 reads:

“3) Central ACs and ASHPs must work as part of a system that provides system status and messaging capabilities as specified below.”

3) Central ACs and ASHPs must work as part of a system that provides system status and messaging capabilities as specified below.

I believe the intent is to cover all units, therefore I propose changing this sentence to the following. This would clearly include all unit types that are listed in the “scope” section of the document.

“3) Central ACs, ASHPs, and GHPs must work as part of a system that provides system status and messaging capabilities as specified below.”

Best regards / Mit freundlichen Grüßen,
