Welcome to the ENERGY STAR Recycle My Old Fridge Campaign!

For many reasons, the time is right to recycle your old fridge. Getting started is easy. Just follow the steps below:

- Find out how much your old refrigerator costs to operate (in energy and dollars).
- Estimate these costs to those of a new ENERGY STAR qualified model.
- Identify a refrigerator recycling program in your area.
- Dial or e-mail the program for participation details.
- Get ready... unplug, say good-bye, and recycle your old fridge. When needed, replace your old unit with a new ENERGY STAR qualified model.
- Energyize and encourage others by sharing YOUR story in the Recycle My Old Fridge Video Challenge. Spread the word!

The ENERGY STAR Recycle My Old Fridge Campaign is a new, nationwide effort, brought to you by the U.S. Department of Energy and the government's ENERGY STAR program. The campaign encourages every American who owns an old, inefficient refrigerator to save money, energy, and the environment by recycling old refrigerators and, when a replacement is needed, to buy a new ENERGY STAR qualified refrigerator.

ENERGY STAR is a joint program of the U.S. Environmental Protection Agency and the U.S. Department of Energy, helping us all save money and protect the environment through energy efficient products and practices. Results are already adding up: Americans, with the help of ENERGY STAR, saved enough energy in 2006 alone to avoid greenhouse gas emissions equivalent to those from 25 million cars — all while saving \$14 billion on their utility bills.

The U.S. Department of Energy's overarching mission is to advance the national, economic, and energy security of the United States; to promote scientific and technological innovation in support of that mission; and to ensure the environmental cleanup of the national nuclear weapons complex.

Find a Refrigerator Recycling Program

Many partners have joined together to make it easy to recycle your old fridge. Here are four ways:

If the Time is Right to Recycle Your Old Fridge...

1. **Check with Your Local Utility:**
Local utilities and energy-efficiency organizations support a growing number of refrigerator recycling programs. Some programs offer cash to recycle your old fridge; others offer utility bill credits.

Save energy. Recycling your old fridge saves enough energy to light ten 13-watt ENERGY STAR qualified light bulbs, one after another, for a total of 70 years!

How an Old Fridge Gets Recycled
(You just might be amazed!)

We're used to recycling everyday items, like plastic milk jugs and newspapers, but old refrigerators are recycled, too.

You might be thinking, "My fridge is an old one, but why don't I just unplug it?" Although this is a way to save money and energy immediately, that old fridge will still be taking up space. Recycling your old fridge permanently takes one more energy hog off the electricity grid. Plus, the components of your old fridge can be made into new products.

What happens to a fridge that gets recycled?

Click on the image on the left, and explore the

ASK ABOUT
ENERGY STAR

ENERGY STAR® Qualified Refrigerators

Lightgreen: Save

On April 29, 2008, the ENERGY STAR specification for refrigerators increased to:

- **Power** units will save this ENERGY STAR.
- These fridges that qualify use even less energy and save consumers even more money.

An average ENERGY STAR qualified refrigerator:

- **SAVES MONEY:** Has a ENERGY STAR qualified energy star can save over \$60 a year when replacing a fridge manufactured before 1993.
- **SAVES ENERGY:** A new fridge uses less energy than a 60-watt light bulb that burns continuously.
- **SAVES THE ENVIRONMENT:** Because they use less energy, ENERGY STAR qualified refrigerators lead to less air pollution and fewer greenhouse gases than less efficient models.

Learn more about ENERGY STAR qualified refrigerators at www.energystar.gov/refrigerators

ENERGY STAR® Qualified Refrigerators

Lightgreen: Save

In the U.S., more than 47 million refrigerators are less than 10 years old. ENERGY STAR encourages consumers to recycle old fridges and, when needed, replace them with new ENERGY STAR qualified models.

By recycling an old fridge, consumers can:

- **SAVE MONEY:** An old fridge can cost over \$100 a year to operate!
- **SAVE ENERGY:** Many older fridges sit in the garage or basement largely unused, but continue to use electricity every day.
- **SAVE NATURAL RESOURCES:** Steel and other metals will be made into new products like cars, steel beams and maybe even new appliances.

Resource Innovations *from*

March 2008

Did You
Know -

there are more than 47 million fridges over ten years old in the U.S.? Did you also know that ENERGY STAR® refrigerator qualifications will increase from 15% better than the federal standard to 20% better on April 28, 2008? Learn more about recycling old refrigerators at <http://recyclemyoldfridge.com/>

Through its Resource Innovations newsletter, Whirlpool Corporation strives to assist utilities and energy services professionals to inform consumers about resource efficient and ENERGY STAR® qualified appliances. Whirlpool Corporation's branded appliances are designed around the consumer, with resource and energy management in mind.

Branded National Consumer Promotions:

The KitchenAid "Perfect Setting" escalating cash back event, running April 6, 2008 through July 5, 2008, offers consumers \$500 cash back when they purchase an appliance package containing 5 select KitchenAid branded appliances. Select appliance packages can include Energy Star qualified KitchenAid brand dishwashers, as well as built-in, side-by-side, and French door refrigerators. Consumers purchasing packages of 4 select KitchenAid brand appliances are eligible to receive \$300 cash back by mail, and those purchasing 3 select appliances can receive \$200 cash back, while those purchasing 2 select appliances can receive \$100 cash back by mail.

May is Maytag Month! Consumers can receive up to \$500 cash back when they purchase select Maytag brand appliances between April 27, 2008 and June 1, 2008. Consumers purchasing 4 select Maytag brand appliances can receive \$400 cash back. Consumers purchasing 3 select appliances can receive \$200 cash back while those purchasing 2 select Maytag brand appliances can receive \$100 cash back. Consumers will receive a bonus \$100 cash back when their package purchase includes the Energy Star qualified Maytag Ice2O French door refrigerator.

The Amana brand "Suite Deal on Stainless" event offers consumers that purchase select Amana brand stainless steel kitchen appliance packages up to \$300 cash back by mail. Consumers can receive \$150 cash back for purchasing a package containing 4 select Amana brand stainless steel appliances of which includes an Energy Star qualified dishwasher. Consumers purchasing packages containing 3 select Amana brand stainless steel kitchen appliances are eligible to receive \$100 cash back by mail. As a bonus, consumers will have an opportunity to receive an additional \$50 - \$120 cash back when they upgrade the refrigerator within the package to qualified models. There is an additional \$30 bonus cash back when consumers upgrade the dishwasher within the package to an eligible Energy Star qualified model.

Your Older Fridge - An Energy Hog?

Written by NAPS
Wednesday, 07 May 2008

(NAPS) - Here's an idea many families can warm to: You may be able to save money and energy with a new refrigerator. It's chilling but true: If your refrigerator was manufactured before 1993, it could be using more than twice as much energy as a new energy-efficient model and be costing you over \$100 a year to run.

On the energy bright side, the U.S. Department of Energy (DOE) says that if all the refrigerators bought this year met the new ENERGY STAR® criteria, it would save enough energy to light all the homes in Washington, D.C. for over 20 months. In fact, the next generation of such refrigerators is so efficient that the average one uses less energy in a year than a 60-watt lightbulb left on all year.

To earn the designation, refrigerators are required to be 20 percent more efficient than the minimum federal standard.

Video Contest

To further encourage people to recycle their old fridges and to purchase qualified units, the DOE is leading the first nationwide refrigerator recycling initiative. The [Recycle My Old Fridge](#) campaign is a national call to recycle older, inefficient

It May Be Time to Recycle that Old Fridge

You may be throwing away up to \$100 every year you keep your old refrigerator plugged in.

Pepco and the U.S. Department of Energy want you to know that any refrigerator built before 1993 is an energy hog. An old fridge uses twice as much energy to keep food cold as newer models.

Replace your old unit with an ENERGY STAR qualified model and save that \$100. Many retailers offer rebates and also will take your old fridge back for proper recycling.

If everyone who purchases a new refrigerator this year chooses an ENERGY STAR model, enough energy could be saved to light every household in the District of Columbia for 20 months.

Visit www.recyclemyoldfridge.com to calculate how much money your old fridge is costing you, and to find money-saving incentives and recycling options.

We invite your organization to submit a decorated refrigerator that will be displayed at the National Fridge Art Exhibit, August 25 to September 2, at the National Building Museum, 401 F St., N.W.

Street Lights Go Energy Efficient

Over the next five years, Pepco will replace mercury vapor street lights with more energy-efficient, high pressure sodium (HPS) fixtures. Federal legislation has prohibited the manufacture or import of mercury vapor lamp ballasts since January 2008.

Crews are expected to complete street light replacements by 2012. There are several benefits to converting to HPS fixtures:

- high pressure sodium street lights use less energy, but produce more light (lumens) than mercury vapor devices,
- the light illumination of the high pressure sodium is a softer, more yellowish light while the mercury vapor is white in color, and
- the illumination from the high pressure sodium lights may reduce the glare for motorists.

This project supports our commitment to saving energy and protecting the environment.

What To Do In A Vehicle-Utility Pole Crash

Pepco cares about your safety – even while driving. If you are involved in a vehicle-pole crash, please heed the following safety rules.

- If your vehicle leaves the road and hits a pole, stay inside and call 911 from your cell phone, or yell for help.
- Never leave the vehicle until a utility line crew arrives to de-energize the line and tells you it's safe. Tell your passengers this, too.
- In the rare case of a vehicle fire, jump out as far as possible and land with both feet on the ground. Afterwards, shuffle or hop away with both feet touching the ground simultaneously.
- Never touch any downed utility pole or wire. Always assume energized electricity is running through them.
- Stay clear from all areas near any downed poles and/or wires – including the ground, a car, tree or rooftop.
- If you witness a pole accident – or to report a downed wire or other life threatening emergency – call Pepco at 202-872-3432 (TTY: 202-872-2369).

To learn more about safety, visit pepco.com and click "Safety."

Toss your fridge, save money

STORY HIGHLIGHTS

- Some new refrigerators use half of what your old one does
- Government Web site calculates how much you can save
- Energy Dept. has contest involving tossing your old fridge

Next Article in Living >

By Jennifer Brink

House

(This Old House) -- You've probably been pining for that energy-efficient fridge for awhile (especially considering if your current model was built before 1993, it costs at least double to run than new Energy Star-rated models of the same size), but throwing away your old one isn't exactly eco-friendly.

To address the problem, the Department of Energy has announced its new Recycle My Old Fridge Campaign.

Check out RecycleMyOldFridge.com to figure out how much your inefficient current fridge is costing you, compare those costs to an Energy Star appliance, find a recycling program in your area along with contact details, and enter the Recycle My Old Fridge Video Challenge for a chance to win a trip for two to Washington, DC.

The campaign was launched in conjunction with new Energy Star guidelines released April 28, which state all standard-sized refrigerators must be 20 percent more efficient than the federal standard to qualify. (Under the old system, fridges only had to be 15 percent more efficient.)

Interesting facts:

- If you ditch your pre-1993 fridge, you'll save enough on energy costs to buy coffee for nearly 80 days. This Old House: Hire energy auditor
- If every American home replaced its pre-1993 fridge with an Energy Star model, we would prevent annual greenhouse gas emissions equivalent to those of more than 6.3 million cars.
- If everyone who buys a new refrigerator in 2008 chooses an Energy Star model over a non-qualified one, it would save \$92 million each year in energy bills. This Old House: Shrink energy bills
- Refrigerators qualified under the new Energy Star guidelines use less energy than a 75-watt light bulb left on full time. This Old House: Energy saving bulbs

Don't Miss

- This Old House: Hand tools save fuel, energy, money
- This Old House: Stylish, sustainable remodel
- This Old House: Greatest new green products
- This Old House: Energy efficient lighting options
- This Old House: Green projects under \$500

If you're ready to take part in the program, here are a few Energy Star fridges for you to consider:

- LG's new 4-Door Refrigerator (set to be released this month) has two refrigerator doors at eye level and two bottom freezer drawers, the top for everyday items and the second for longer-term storage. The unit also has a nearly 1-foot-high ice and water dispenser. It retails for between \$3,199 and \$3,499.
- Available in stainless steel, black, and white, a side-by-side refrigerator from Electrolux features Wave-Touch Electronic Controls, which light up at a slight touch and fade away after a choice is made for an unobtrusive finish.

Refrigerator review: It's a buyer's market

If you've been waiting to replace your refrigerator, this could be the right time to get a good deal. Prices are stable, energy use is about half of what it was in 1990, and stores need to make room for new models. Plus, as our refrigerator review shows, you'll find more features in every price range.

Even economy models priced as low as \$500 now offer spillproof shelves, gallon-jug storage on the door, and icemakers. Midpriced refrigerators (\$1,000 to \$1,500) have water and ice dispensers on the door plus your choice of a stainless-steel or stylish high-gloss finish that's easy to clean. Inside, they feature temperature-controlled drawers that help keep food fresh longer.

Spend more than \$2,500 and you'll get such design innovations as sleek, integrated water dispensers, drawers that quickly chill foods, and LED lighting.

For this refrigerator review, we spent months testing dozens of refrigerators, from relatively basic white boxes to four-door refrigerators and built-in refrigerator and freezer columns. The \$2,500 Samsung four-door side-by-side has two drawers on the bottom that convert from refrigerator to freezer so that you can customize your storage. Bosch's Integra built-in refrigerators and freezers can be put next to each other or installed separately in different areas of the kitchen. But at \$7,600, that choice isn't

Gladiator(R) GarageWorks Partners With The U.S. Department of Energy in Effort to Recycle Old Energy-Draining Refrigerators

Chillerator(R) Garage Refrigerator Joins The Art of Recycling: The Coolest Show in Town Exhibition as Part of Refrigerator Showcase

BENTON HARBOR, Mich., Aug. 29 /PRNewswire-FirstCall/ -- Gladiator(R) GarageWorks, the leader in garage organization, is proudly sponsoring The Art of Recycling: The Coolest Show in Town exhibition. The exhibition showcases an artistic take on the history of refrigerator innovation as part of the U.S. Department of Energy's (DOE) ENERGY STAR(R) Recycle My Old Fridge Campaign.

(Logo: <http://www.news.com.com/cgi-bin/prnh/20040202/DETU004LOGO>)

As the maker of the only ENERGY STAR(R) qualified refrigerator designed specifically for the garage, Gladiator(R) GarageWorks joins the DOE campaign, which encourages Americans who own old, inefficient refrigerators to trade them in. In many instances, instead of recycling an old refrigerator, homeowners take their old models and use them in the garage as a second food storage solution. Due to extreme garage conditions, even the best energy efficient refrigerator will fall short on savings. Unlike the Chillerator(R) garage refrigerator, kitchen refrigerators are simply not designed with the garage in mind.

"Homeowners today are very concerned about energy efficiency, yet they continue to put a drain on their energy budgets by placing old refrigerators in the garage," said Lou Ann Schafer, senior marketing manager for Gladiator(R) GarageWorks. "By joining up with DOE, we hope to bring a newfound awareness of energy efficiency and refrigerator recycling while highlighting the unique benefits and cost savings of our ENERGY STAR(R) qualified Chillerator(R) garage refrigerator."

The Coolest Show in Town exhibit will feature up to 50 old refrigerators that have been turned into works of art by students, institutions, utility companies, private organizations, and individual artists across the U.S. Visitors to the exhibition will be able to vote for their favorite refrigerator art. The exhibition is taking place Mon., Aug. 25 through Tues., Sept. 2 at the National Building Museum in Washington, D.C.

A blue ribbon panel of judges will select the top three entries based on the following criteria: Best Use of Recycled Materials; Overall Creativity; and Best Portrayal of the Campaign Theme. The winners will be announced at a celebration event on Sept. 2 and will be awarded with a Gladiator(R) GarageWorks Chillerator(R) garage refrigerator.

For more information on the Chillerator(R) garage refrigerator visit www.gladiatorgw.com and for more information on The Art of Recycling: The Coolest Show in Town exhibition, visit www.recyclemyoldfridge.com

About Gladiator(R) GarageWorks

Gladiator(R) GarageWorks is the leader in garage organization delivering innovative solutions that allow garage owners to organize their space in a way that suits their individual storage needs. It is the only garage organization system to offer coordinated appliances designed for the harsh garage environment.

Gladiator(R) GarageWorks offers a Premier pre-assembled line and Ready-to-Assemble line for do-it-yourselfers. Products are available through local garage dealers, retailers including Sears and Lowe's or via www.GladiatorGW.com
