ENERGY STAR Certified Homes Washington v3.2 (Rev. 08) Draft Program Requirements Comment Form

Organization Name: Building Efficiency Resources, LLC

Respondent Last Name: Speciale

Respondent First Name: Eurihea

Comments: BER generally supports the changes to the program requirements for WA, based on the new code changes.

The only items we are not clear about are why the duct location and leakage requirements were loosened.

Also, why was the SHGC for windows reduced to 0.30?

We are not necessarily opposed to these items; it is just not made clear in the PPT presentation slides.

ENERGY STAR Certified Homes Washington v3.2 (Rev. 08) Draft Program Requirements Comment Form

Organization Name: New Tradition Homes

Respondent Last Name: Tapio

Respondent First Name: Steve

Comments: There is only reference to climate zone 5 and 6. What about climate zone 4, pretty much all of western Washington?
