Subject: Get rid of gas water heaters from Energy Star

Hello,

My name is Heidi Cody and I live in Vancouver WA. I support the EPA removing gas water heaters from Energy Star. Here in Washington, buildings account for about 27% of ghg emissions. Getting rid of gas in homes, in any form, will help reduce ghg emissions more quickly. It's really that simple. It is imperative that we do what we can to mitigate the climate crisis.

Thank you,
Heidi Cody
