ENERGY STAR[®] Residential New Construction Programs

Historical Document

This document is provided for reference because it has been superseded by a more recent Version or Revision. Please find current program documents on the <u>Program</u> <u>Requirements</u> webpage.

Use of older Versions and Revisions, such as this document, are typically limited to homes and buildings with a permit date (or, for manufactured homes, a production date) prior to a specified date. Consult the <u>Implementation Timeline</u> table to assess whether a home or apartment is still eligible to be certified using this document.

For questions or more information, contact us at <u>energystarhome@energystar.gov</u>.

ERI Target Procedure for use with ANSI/RESNET/ICC 301-2019

This document provides detailed instructions for determining the ENERGY STAR ERI Target, the highest ERI value that each rated multifamily unit, excluding townhouses, may achieve to earn the ENERGY STAR. Note that, in addition to meeting the ENERGY STAR ERI Target for each unit, units shall also meet all Mandatory Requirements for All Multifamily New Construction Projects in Exhibit 2 of the National Program Requirements for ENERGY STAR Multifamily New Construction, Version 1 / 1.1 / OR-WA 1.2. While Townhouses are eligible to earn ENERGY STAR Multifamily New Construction certification by meeting their ENERGY STAR ERI Target and also meeting all Mandatory Requirements for All Multifamily New Constructions for determining their ENERGY STAR ERI Target is in the National ERI Target Procedure for ENERGY STAR Single-Family New Homes.

An EPA-recognized Home Certification Organization's (HCO) Approved Software Rating Tool shall automatically determine (i.e., without relying on a user-configured ENERGY STAR Multifamily Reference Design) this target for each Rated Unit. This shall be done by configuring the ENERGY STAR Multifamily Reference Design in accordance with Exhibit 1, the Expanded ENERGY STAR Multifamily Reference Design Definition, and calculating its associated ERI value. The ERI value shall be calculated using ANSI / RESNET / ICC Standard 301-2019 including all Addenda and Normative Appendices, with new versions and Addenda implemented according to the implementation schedule defined by the HCO that the building is being certified under. Any exceptions shall be approved by EPA and reported at www.energystar.gov/ERIExceptions. This value, rounded to the nearest whole number, shall equal the ENERGY STAR ERI Target.

The Oregon and Washington ERI Target Procedure (ANSI 301-2014) must instead be used to determine the ENERGY STAR ERI Target when using ANSI / RESNET / ICC Standard 301-2014.

Oregon and Washington ERI Target Procedure (ANSI 301-2019) ENERGY STAR Multifamily New Construction, Version 1.2 (Rev. 02)

Exhibit 1: Expanded ENERGY STAR Multifamily Reference Design Definition

Building Component	Ex	panded ENERGY STAR Mu	ultifamily Reference De	sign Definition ¹				
Foundations:	Construction Type & Structural Mass: S	Same as Rated Unit ² , except	t:					
	For masonry floor slabs, modeled with 80% of floor area covered by carpet and 20% of floor directly exposed to room air							
	Conditioning Type: Same as Rated Unit		4					
	Crawlspaces shall be modeled as	vented with net free vent ap	perture = 1sq. ft. per 150	sq. ft. of crawispace	noor area			
	Gross Area: Same as Rated Unit ² Insulation: ^{3,4} Choose appropriate insulation level below;							
	Basement Wall Continuous Insula	ation R-Value only applies to	conditioned basements.	if applicable insulati	on shall he loc:	ated on interior		
	side of walls		conditioned basements,					
	 Floor assemblies above crawlspace foundations shall be configured to meet the applicable floor assembly U-factor listed in the building 							
	component section for Floors Ove	er Unconditioned Spaces	-	-		-		
	On-grade and below-grade slab fl	oors shall be insulated to the	e Slab Insulation R-value	at both the perimete	r for the entire	depth of the slab		
	or 2 ft. if slab depth is not specifie	d by user, and under the ent	tire slab area

Oregon and Washington ERI Target Procedure (ANSI 301-2019)

ENERGY STAR Multifamily New Construction, Version 1.2 (Rev. 02)

Exhibit 1: Expanded ENERGY STAR Multifamily Reference Design Definition (Continued)

		Iultifamily Reference Design Definition (Continued)				
Internal	Same as Energy Rating Reference Home, as defined by ANSI / RESNET / ICC Std. 301					
Mass:						
Lighting,		ures in qualifying light fixture locations 90% for interior; 0% for exterior and garage				
Appliances,	Refrigerator: 423 kWh per year					
Fixtures & Internal	Dishwasher: Capacity Same as Rated Unit ² , or Standard if no dishwasher installed in Rated Unit					
Gains:	For Standard capacity: LER = 270, GHWC = \$22.23,					
Gains:	For Compact capacity: LER = 203, GHWC = \$14.20, Elec\$ = \$0.12, Gas\$ = \$1.09, LCY = 208					
	Ceiling Fan: 122 CFM per Watt; Quantity = Number of bedrooms + 1 when ceiling fans present in the Rated Unit; otherwise Quantity = 0					
	Clothes Washer and Dryer: Same as Energy Rating Reference Home, as defined by ANSI / RESNET / ICC Std. 301					
	Water fixtures: all showers and faucets ≤ 2.0 gpm					
	Internal Gains: Same as Energy Rating Reference Home, as defined by ANSI / RESNET / ICC Std. 301, except for adjustments for the lighting,					
Heating Systems:	 refrigerator, dishwasher, clothes washer, clothes dryer, and ceiling fans specified in this section Heating capacity shall be selected in accordance with ACCA Manual S based on loads calculated for the Reference Design in accordance with ACCA Manual J, Eighth Edition, ASHRAE Handbook of Fundamentals, or an equivalent computation procedure. For forced-air HVAC systems, degraded capacity from Grade III install shall be accounted for using same methodology applied to Energy Rating Reference Home. Where heat from a central boiler is distributed by water-loop heat pumps within the Rated Unit, in accordance with the methodology for the Rated Home in ANSI / RESNET / ICC Std. 301, the Reference Design shall be configured such that the heating load is assigned to two separate heating systems: 1) a heat pump with a capacity that is equal to the Reference Design heating load divided by 4.2 COP and 2) a boiler with the balance of the capacity of (1-1/4.2) or 76.19% 					
	Fuel Type: Same as Rated Unit ^{2, 8}	a da III airflann and matt drann far air annsas haat annsas alan Ora da III raf, abarra				
		ade III airflow and watt draw; for air-source heat pumps, also Grade III ref. charge				
		ce Design shall be configured with air-source heat pump where Rated Unit is modeled with heat, or electric baseboard heat; applicable efficiency selected from below ⁹				
	Climate Zone:	CZ 4C & 5 CZ 6				
	Gas Furn. AFUE:	95 95				
	Oil Furn. AFUE:	85 85				
	Gas Boiler AFUE:	90 90				
	Oil Boiler AFUE:	86 86				
	Central Boiler, ≥ 300 KBtu/h Et:	86 86				
	Central Boiler w/WLHP, ≥ 300 KBtu/h Et:	89 89				
	Air-Source Heat Pump HSPF: Air-Source Heat Pump Backup:	9.5 9.5 Electric Electric				
	For non-electric warm furnaces and non-electric boilers, serving the Rated Unit and no other units, the Electric Auxiliary Energy shall be determined in accordance with the methodology for the Energy Rating Reference Home in ANSI / RESNET / ICC Std. 301. For non-electric boilers, serving the Rated Unit and other units, the Electric Auxiliary Energy shall be determined in accordance with the methodology for the Rated Home in ANSI / RESNET / ICC Std. 301, using motor efficiency of 0.85					
Cooling		ACCA Manual S based on loads calculated for the Reference Design in accordance with				
Systems:	ACCA Manual J, Eighth Edition, ASHRAE Handbook	of Fundamentals, or an equivalent computation procedure. For forced-air HVAC systems,				
	Fuel Type: Same as Rated Unit ^{2, 8}	unted for using same methodology applied to Energy Rating Reference Home				
		ade III airflow and watt draw; for AC's & air-source heat pumps, also Grade III ref. charge				
	System Type: Same as Rated Unit ² , except Reference Design shall be configured with air-source heat pump where Rated Unit is modeled with air-source or ground-source heat pump, electric strip heat, or electric baseboard heat; applicable efficiency selected from below ¹⁰					
	Climate Zone:	CZ 4 C & 5 CZ 6				
	AC SEER:	13 13				
	Air-Source Heat Pump SEER:	15 15				
	Where system type is a chiller or cooling tower with water-loop heat pumps, Reference Design SEER _{eq} shall be determined in accordance with the methodology for the Rated Unit in ANSI / RESNET / ICC Std. 301, using motor efficiency of 0.85. For chillers, Reference Design SEER _{eq} shall be determined using 0.78 kW/ton. For water-loop heat pumps, Reference Design SEER _{eq} shall be determined using 14 EER					
Service	Use (Gallons per Day): Same as Energy Rating Refe	rence Home, as defined by ANSI / RESNET / ICC Std. 301, except for reduced usage				
Water	resulting from R-3 pipe insulation and the equipment specified in the Lighting, Appliances, Fixtures & Internal Gains Section ¹¹ Tank Temperature: Same as Energy Rating Reference Home, as defined by ANSI / RESNET / ICC Std. 301					
Heating Systems:	Recirculation Pump Energy (for pumps serving the Rated Unit and no other units): 0 kWh per year					
	Recirculation Pump Energy (for pumps serving the Rated Unit and other units): o kwin per year Recirculation Pump Energy (for pumps serving the Rated Unit and other units): as defined by ANSI / RESNET / ICC Std. 301, using 0.85 for motor efficiency and using the same HP as the pump serving the Rated Unit					
	Fuel Type & System Type (when Rated Unit is serve	by a commercial system): Same as system serving the Rated Unit. For boilers or water				
	heaters, use 85% Et. For electric water heaters, use Euclider Type & System Type (when Rated Unit is serve	J by residential systems): If Rated Unit uses a system with a gas or propane fuel type,				
		nit uses a system with an oil, electric, or other fuel type, model as 60 gallon electric heat				
	Climate Zone:	CZ 4 C & 5 CZ 6				
	Gas DHW EF:	0.91 EF 0.91 EF				
	Electric DHW EF:	2.5 EF 2.0 EF				

Exhibit 1: Expanded ENERGY STAR Multifamily Reference Design Definition (Continued)

		ed ENERGT STAR Multinaning Reference De						
Thermal	Duct Leakage to Outside: The greater of 4 CFM25 per 100 sq. ft. of conditioned floor area or 40 CFM25							
Distribution	Duct Insulation: R-8 on all ducts located in unconditioned space							
Systems:	Duct Surface Area: Same as Rated Unit ²							
	Supply and Return Duct Locations shall be configured according to the number of stories & ceiling type of the Rated Unit using the table below							
	Ceiling Type:	100% Adiabatic Ceiling	All Other					
	One Story Unit:	100% of Supply & Return Ducts in Conditioned Space	100% of Supply & Return Ducts in Vented Attic					
	Multi-story Units:	100% of Supply & Return Ducts in Conditioned Space	75% of Supply & Return Ducts in Vented Attic /					
	_		25% of Supply & Return Ducts in Conditioned Space	ce				
Thermostat:	Type: Programmable							
	Temperature Setpoints: Same as Energy Rating Reference Home, but with offsets for a programmable thermostat, as defined by ANSI / RESNET / ICC Std. 301							
Infiltration &	Compartmentalization Rates: 0.3 cfm50/ft ² Enclosure Area, with Aext applied to calculate Infiltration Rate, in accordance with ANSI / RESNET /							
Mechanical Ventilation:	ICC Std. 301							
	Mechanical ventilation system without heat recovery							
	Rate: CFM = 0.01 * CFA + 7.5 * (Nbr + 1), where CFA = Conditioned Floor Area and Nbr = Number of Bedrooms; Runtime: 24 Hours / Day							
	Fan Watts: Watts = CFM Rate / 2.8 CFM per Watt, where CFM Rate is determined above							
	Climate Zone:		CZ 4 C & 5 CZ 6					
	Ventilation Type:		Exhaust Exhaust					

Oregon and Washington ERI Target Procedure (ANSI 301-2019) ENERGY STAR Multifamily New Construction, Version 1.2 (Rev. 02)

Footnotes:

- 1. Any parameter not specified in this exhibit shall be identical to the value entered for the Rated Unit. Where envelope building components do not exist in the Rated Unit, such as a foundation or slab, they should not be modeled in the ENERGY STAR Multifamily Reference Design, unless explicitly stated, such as vented attics where unvented attics are present in the Rated Unit or when needed to locate ducts. Where the envelope component is adiabatic in the Rated Unit, it shall also be adiabatic in the Multifamily Reference Design. Where the envelope component is not adiabatic but is adjacent to a space other than those specified in the Building Component column of Exhibit 1, model as uninsulated in the Reference Design.
- 2. "Same as Rated Unit" indicates that the parameter shall be identical to the value entered for the Rated Unit.
- 3. Slab insulation R-values represent nominal insulation levels; and assembly U-factors for foundations, floors, walls, and ceilings represent the overall assembly, inclusive of sheathing materials, cavity insulation, installation quality, framing, and interior finishes.
- 4. If software allows the user to specify the thermal boundary location independent of the conditioned space boundary in the basement of the Rated Unit, then the thermal boundary of the ENERGY STAR Multifamily Reference Design shall be aligned with this boundary. For example, if the thermal boundary is located at the walls, then the wall insulation shall be configured as if it was a conditioned basement. If the thermal boundary is located at the floor above the basement, then the floor insulation shall be configured as if it was a floor over an unconditioned space.
- 5. Note that the U-factor requirement applies to all fenestration while the SHGC only applies to the glazed portion.
- 6. When determining the ENERGY STAR ERI Target, the following formula shall be used to determine total window area of the ENERGY STAR Multifamily Reference Design:

$$AG = 0.15 \times CFA \times FA \times F$$

Where:

- AG = Total glazing area
- CFA = Total conditioned floor area
- FA = (Gross above-grade thermal boundary wall area) / (Gross above-grade boundary wall area + 0.5 x Gross below-grade thermal boundary wall area)
- F = 1- 0.44 x (Gross common wall area) / (Gross above-grade thermal boundary wall area + Gross common wall area)

And where:

- Thermal boundary wall is any wall that separates conditioned space from unconditioned space, outdoor environment, or the surrounding soil;
- Above-grade thermal boundary wall is any portion of a thermal boundary wall not in contact with soil;
- Below-grade boundary wall is any portion of a thermal boundary wall in soil contact; AND
- Common wall is the total wall area of walls adjacent to other conditioned space, not including foundation walls.
- 7. A vented unconditioned attic shall only be modeled in the Multifamily Reference Design where attics (of any type) exist in the Rated Unit or when specified as the Duct Location in the Thermal Distribution Systems section of this Exhibit. Where the Rated Unit has more than one ceiling type, the ceiling area used to calculate the vent aperture area shall be the area of the ceiling that is exposed to exterior, under attics, and/or under other unconditioned common spaces. Where the Rated Unit is entirely located beneath another dwelling unit or unrated conditioned space, no attic is modeled in the Reference Design.
- 8. Fuel type(s) shall be same as Rated Unit, including any dual-fuel equipment where applicable. For a Rated Unit with multiple heating, cooling, or water heating systems using different fuel types, the applicable system capacities and fuel types shall be weighted in accordance with the loads distribution (as calculated by accepted engineering practice for that equipment and fuel type) of the multiple systems, unless otherwise specified by ANSI / RESNET / ICC Std. 301.
- 9. For a Rated Unit without a heating system, the ENERGY STAR Multifamily Reference Design shall be configured with a 78% AFUE gas furnace system, unless the Rated Unit has no access to natural gas or fossil fuel delivery. In such cases, the ENERGY STAR Reference Multifamily Design shall be configured with a 7.7 HSPF air-source heat pump.
- 10. For a Rated Unit without a cooling system, the ENERGY STAR Multifamily Reference Design shall be configured with a 13 SEER electric air conditioner.
- 11. That is to say, representative of standard-flow plumbing fixtures, reference clothes washer gallons per day, standard distribution system water use effectiveness, a hot water piping ratio of 1.0, no pipe insulation, and no drain water heater recovery.
