ENERGY STAR®
Light Commercial HVAC
Draft 2 Version 3.0

Stakeholder Webinar and Discussion

Abigail Daken, U.S. EPA

October 6, 2016
Webinar Audio Access

TO USE YOUR COMPUTER'S AUDIO:
You will be connected via your computer's microphone and speakers (VoIP). A headset is recommended.

-- OR --

TO USE YOUR TELEPHONE:
Select "Use Telephone" after joining the webinar and call in using the numbers below:

United States: +1 (631) 992-3221
Access Code: 183-987-944
Audio PIN: Shown in control panel “Audio” tab after joining
Webinar Participation

Click here to raise your hand. Doing so indicates that you want to be unmuted and speak to the audience.

Type any questions or comments here during the webinar.
Agenda

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Introduction

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Specification Development Cycle

1. Stakeholder Notification
2. Open Specification for Revisions (as necessary)
3. Energy & Environmental Analysis
4. Market, Industry & Design Research
5. Test Methodology Development (as necessary)
7. Stakeholder Meetings
8. Release Subsequent Drafts with Interim Decision Memos (as necessary)
9. Post Drafts and Stakeholder Comments to Web Site
10. Finalize Specification
11. Specification Takes Effect
12. Manufacturers Join Program as Partners and Begin Labeling Products
13. Officially Launch Specification with Industry and Stakeholders
14. Monitor Market Penetration
15. Final Decision Memorandum
Important Process Elements

• Consistency
• Transparency
• Inclusiveness
• Responsiveness
• Clarity
Guiding Principles for Specification Development

1. Significant energy savings can be realized on a national basis
2. Product performance can be maintained or enhanced with increased energy efficiency
3. Purchasers recover their investment in increased energy efficiency within a reasonable period of time
4. Energy efficiency can be achieved through several technologies
5. Product energy consumption and performance can be measured and verified with testing
6. Labeling would effectively differentiate products and be visible for purchasers
Scope and Definitions

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Scope - Capacity Range

- \( \geq 65,000 \text{ Btu/h and } < 240,000 \text{ Btu/h} \)

- Units \(< 65,000 \text{ Btu/h} \) continue to be out of scope due to poor product payback (over 20 years)
  - EPA reached out to commenters for cost and energy data to update analysis
  - No data to support better payback was supplied
Definitions

• Updated to maintain consistency
  – Commercial Package Air-Conditioning and Heating Equipment as per 10 CFR part 431, Subpart F
  – Basic Model as per 10 CFR part 431, Subpart F
    • Commercial Package Air-Conditioning and Heating Equipment
    • Variable Refrigerant Flow Multi-Split
  – Cooling Capacity
    • As per AHRI Standard 340/360-2015
Energy Efficiency Criteria

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Updated Proposed Criteria for Draft 2

• Stakeholders expressed concern that Draft 1 proposals in all subcategories were too stringent
• Upon further analysis, EPA agreed, and Draft 2 contains updated proposals
• Data sources:
  – AHRI Directory of Certified Product Performance
  – DOE Technical Support Document
  – ENERGY STAR Unit Shipment Data
  – Discussions with manufacturers and other stakeholders
• In many cases, proposed levels align with other requirements (e.g. CEE Tiers)
Notes on Metrics

- COP17 is a performance requirement
  - Several commenters stated that this poses no significant additional burden
- IEER rounding requirement
  - VRF: ANSI/AHRI Standard 1230-2010
  - AC and HP: AHRI Standard 340/360
## Draft 2 Proposed Criteria for Light Commercial Air Conditioners

<table>
<thead>
<tr>
<th>Equipment Type</th>
<th>Size Category</th>
<th>Heating Section Type</th>
<th>Minimum Energy Efficiency Criteria</th>
</tr>

</table>

^EPA uses simple payback of incremental initial cost divided by annual utility bill savings.
Review of Test Method

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Review of Test Method

- 10 CFR Part 431 Subpart F § 431.96
  - IEER, EER, and COP
- VRF products shall meet the test requirements of AHRI 1230 for IEER
  - EPA will update the specification language once VRF IEER testing is incorporated into the CFR
Updated Sampling Requirements

• Sampling language is maintained, with two options:
  – Products selected for testing per DOE sampling requirements in 10 CFR Part 429, Subpart B § 429.43.
  – A single sample is selected and tested (same process as V2.2)

• For typical product, if multiple sample option is used, four samples must be available for testing as per EPA verification test guidance to certification bodies

• EPA agrees this is overly burdensome for products that must be built to order for testing

• EPA will work with stakeholders to craft updated guidance for this type of product
Next Steps

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Next Steps

- Comment deadline **October 19, 2016**
- Draft Final November 2016
- Final and available for certification by end of 2016
- Effective 1/1/2018 (all products must meet to be labeled)
Discussion

1. Introduction
2. Scope and Definitions
3. Energy Efficiency Criteria
4. Test Methods and Sampling
5. Next Steps
6. Discussion
Discussion

- Open to comments and questions
- Please raise your hand in the webinar control panel or write in a question
Written Comments

- In addition to making verbal comments during today’s meeting, stakeholders are strongly encouraged to submit written comments and data.
  - *Comments will be displayed for public viewing unless otherwise specified by the commenter.*

- Please send all comments to: LCHVAC@energystar.gov
