**Re: EPA's Proposal to Sunset ENERGY STAR Specifications for Furnaces and Other Gas-Fired Appliances**

To whom it may concern,

On behalf of the Natural Gas Association of Georgia and our membership, we are writing in opposition to the Environmental Protection Agency's (EPA's) recent notice regarding ENERGY STAR residential heating, ventilation, and air-conditioning (HVAC) equipment, which was published on May 18, 2023.<sup>1</sup> Concerningly, this proposal outlines plans to phase out the labeling of natural gas furnaces, as well as foreshadows the agency's plans to also sunset similar specifications for gas-fired boilers,<sup>2</sup> dryers, and commercial packaged boilers.<sup>3</sup>

At the Natural Gas Association of Georgia, safety is our core value. As concerns over emissions from natural gas appliances are raised, we look to credible research and objective technical information to guide our work. We encourage regulators and policymakers to look to neutral experts when making decisions, rather than poorly designed studies funded by non-governmental organizations seeking to reduce the use of natural gas and limit consumer choice.

Our members are committed to delivering clean, safe, reliable and affordable fuel to communities across Georgia. We value ongoing engagement with leaders at both the local and national level to ensure decisions impacting our state are based on objective data and are made in the best interests of those we serve.

According to the ENERGY STAR® Products Program Strategic Vision and Guiding Principles, "[t]he ENERGY STAR product labeling program reduces greenhouse gas emissions by removing barriers in the market that deter consumers and businesses from easily identifying the financial and environmental benefits of purchasing the most energy efficient product model that otherwise meets their needs."<sup>4</sup> In the short notice provided to interested

stakeholders, EPA did not explain how these proposed changes are aligned with ENERGY STAR's strategic vision and guiding principles, or are in line with the program's authorizing statute. Our organization would contend phasing out gas furnaces and other gas-fired appliances from the ENERGY STAR program runs counter to the goals.

Natural gas is one of the cleanest burning fuels available. The direct use of natural gas in the home to fuel cooking, water, and space heating, as well as clothes drying, is even more efficient than burning it to produce electricity. Based on 2020 power generation emissions data from the EPA, the use of natural gas can lower household emissions by 17% compared with a home using many minimum-efficiency electric appliances including an ENERGY STAR heat pump for space heating.<sup>5</sup> Gas-fired appliances become less carbon intense as more renewable natural gas (RNG) is utilized. Biomethane collected from agricultural waste, landfills, and wastewater treatment plants is plentiful and when converted to RNG reduces methane emissions. Similarly, hydrogen, as a part of the fuel mix, will cause fewer appliance emissions.

Natural gas utilities strive to provide dependable natural gas service at an affordable cost. Homes that use natural gas save an average of \$1000 per year compared to a typical electric home.<sup>6</sup> Nearly 180 million people and more than 5 million businesses in the U.S. rely on natural gas. Policy driven electrification, like this ENERGY STAR proposal and similar ones proposed by the EPA, will not only result in utility bill increases; it will force consumers to shoulder the cost of replacing the appliances and the correlating equipment they use to heat their homes.

If the ENERGY STAR program is supposed to help consumers and businesses find environmentally beneficial and affordable appliances, then the ENERGY STAR label should still be available to gas furnaces and all gas-fired appliances. For these reasons, the Natural Gas Association of Georgia opposes this proposal and any others that do not allow for gas-fired appliances to be a part of the ENERGY STAR program.

Sincerely,

Jennifer W. Walls

Executive Director

Natural Gas Association of Georgia
