

Award Recipient of the ENERGY STAR Challenge for Industry

Wetaskiwin Facility
Saputo Dairy Products Canada G.P.
4719 40th Avenue
Wetaskiwin, Alberta, T9A 0A1, Canada

The Wetaskiwin facility was built in 1962 as an evaporated milk plant for Carnation brand. Over the years, it has diversified its production and included products such as condensed milk, butter, specialty sauces and honey butter. In 2001, Saputo acquired the Wetaskiwin facility as part of its Dairyland acquisition in western Canadian provinces. Wetaskiwin is one of Alberta's oldest cities, and its water tower, built in 1909, is one of the oldest municipal water towers in Alberta.

The Wetaskiwin facility achieved the ENERGY STAR Challenge for Industry in 2012, in one year of its baseline, mainly by reducing its total energy usage by 31%. This resulted in a 17.4% reduction in energy intensity. Equipment upgrades, as well as leaks/insulation improvements, and daily best practices through increased awareness have helped to improve the facility's energy efficiency.

Saputo maintains a comprehensive corporate energy management program. Under this program, Saputo has progressively applied good energy practices promoted by ENERGY STAR including internal energy benchmarking, tracking, and employee awareness.
