Subject: Comments on ENERGY STAR Commercial refrigerator and freezer version 3.0

Dear Mr. Kent,

Hoshizaki America agrees that differentiation should remain the same as version 2.1. Continuation to maintain separate levels for commercial refrigerators and freezers based on configuration, application, and door size make sense. There is no data at this time to show a reason to determine performance levels based on refrigerant.

Hoshizaki America also agrees with the current cutoff points for volume in the daily energy consumption requirements. After reviewing the data points shown, there appears to be a good representation without certain model missing due to a volume cutoff.

Hoshizaki requests to review any energy consumption requirement where no units currently meet this. These requirements might be unrealistic and need to be modified to help obtain some unit penetration.

Look forward to the second and hopefully final draft.

Sincerely yours,

Stephen Schaefer
