**Subject:** ENERGY STAR TV Specification revision

**Importance:** High

Hello ENERGY STAR,

Thank you for the opportunity to provide input to the Agency on the recently proposed specification revision for televisions, specifically with respect to the testing of televisions enabled with Automatic Brightness Control (ABC).

1. NEEP supports the updated proposal on how to test Televisions when shipped with ABC enabled.
2. NEEP recommends that the Agency add an additional on-mode power test for these TVs that are shipped with ABC enabled. We support Natural Resources Defense Council's recommendation that such televisions be tested (for on-mode power) with the ABC feature disabled in order to gain important information that will inform future specification development (Federal appliance standards, ENERGY STAR criteria). We do not believe this would add significant testing burden on the manufacturers.

Thank you again.

.....
