

Charles/Rachel/Steve:

After review I believe the Version 2.0 work you have done is very good and quite acceptable as presented. Consistent with my earlier input I am a strong advocate of the aged values and my belief they are more important than the initial, which, if utilized in lieu of the initial values, would perhaps allow inclusion of a few more products/partners. Some product applications don't do very well initially but after in situ aging they can be found to perform as well or even better than those that meet the initial. Non-the-less it appears that actual field aging will remain and I am just fine with that.

The only other comment I would add is; it appears you have added some work for tracking and monitoring of the products and partners. That is fine as well - just an observation.

Rachel/Steve: Nice job, I believe the spark you started has turned into a very nice flame – that should reflect well on both of you. I know that it has not always been easy to maintain the requirements and ideals initially set forth but it has been done professionally and consistently over the years. Good work!

Thanks,  
Dave
