

**Email received on January 4, 2011 from Gary Flamm.**

To distinguish between CFL and 2' linear "biax" lamps, California Energy Commission is proposing the following definition for the next update to T24:

**COMPACT FLUORESCENT LAMP** is a fluorescent lamp less than 9 inches long, with a small diameter glass tube (T5 or less) that is folded, bent, or bridged to create a long discharge path in a small volume. The lamp designs generally include an amalgam and a cold chamber, or a cold spot, to control the mercury vapor pressure and light output.
