

Email received on June 22, 2010 from Philip Tarazi.

Thank you for the opportunity to respond. We at Green Ray LED appreciate all the effort you put into this project.

In the 2009 EPA-DOE Memorandum of Understanding, we read that one of the goals was to recognize 'Super Efficient Products' and a key Energy Star principle was 'to extend technology neutrality'.

From Green Ray LED's point of view, we don't see this happening.

At the time I write this email, Green Ray LED's 4' T8 LED 4100k is listed by the Lighting Facts as having the highest efficacy compared to all other LED products without regard to the shape, style or purpose of the LED.

Yet, this is no room for this product within the Energy Star's existing program.

As we move forward, we hope you'll find a way to include the most efficient LED on your list for rebates in the near future.

Sincerely,

Philip Tarazi
