

Email received on June 8, 2010 from Bob Henry.

We at Infinilux are, in general, behind the new Draft spec.

We have 1 comment related Solid State Lumen Maintenance:

We would like for the EPA to keep the 2 Lumen Maintenance options available:  
Page 17, Option 2, is a large hurdle for smaller suppliers and will serve to eliminate smaller players from the program.

Option1, the module or component method, is rigorous enough, that when taken with the LM80 data from large LED makers, like Cree, and measured at approved labs, it should effectively emulate Option 2 at a much lower price point.

The large LED companies have vigorously tested the LEDs and make their LM80 data available. Smaller fixture makers can readily demonstrate thermal design robustness under the aegis of Option 1 and still ensure that excellent products go to market.

We at Infinilux request that both methods be left in place

Thanks, regards, Bob
