JEITA's Comment on the ENERGY STAR Version 6.1 Computers Specification

January 10, 2014

Dear Mr. Robert Meyers:

The Japan Electronics and Information Technology Industries Association (JEITA) is the largest IT & Electronics industries associations with about 400 companies in Japan covering personal computers, consumer electronics, industrial electronics, semiconductor, and other electronic components.

We, the PC Energy Saving Working Group of JEITA, appreciate the opportunity to provide comment to the ENERGY STAR Version 6.1 Computers Specification published by the Environmental Protection Agency (EPA) on December 5, 2013.

JEITA's comment

The definition of the *Two-in-One Computer* is unclear.

What is the definition of "*processing capability*" ?   What "*processing capability*" (typically found in a Notebook Computer) means should be clearly defined.

Sincerely,

Hidetoshi Mizoguchi

Chairman, PC Energy Saving Working Group

Japan Electronics and Information Technology Industries Association (JEITA)
