

# ENERGY STAR® 2014 Snapshot

Measuring Progress in the Commercial and Industrial Buildings Sector

August 2015

This document provides an at-a-glance summary of the latest national ENERGY STAR metrics to help you, our partners, see the impact of your efforts. Specifically, the Snapshot summarizes national as well as state and local trends in energy and water benchmarking of commercial and industrial properties. It also provides information about ENERGY STAR certified commercial and industrial properties, and commercial building designs.

## ENERGY STAR Year in Review

The energy used to run our nation's commercial and industrial buildings is a significant contributor to the country's greenhouse gas emissions. That's why, for more than 20 years, EPA has offered ENERGY STAR to help commercial and industrial building stakeholders adopt a culture of continuous energy improvement.

I am pleased to share the 2014 ENERGY STAR Snapshot, demonstrating that thousands of businesses and organizations, in partnership with EPA's ENERGY STAR program, are working hard to cut their energy waste and curb carbon pollution.

The activities of our partners in the commercial and industrial markets, from cement manufacturing to religious worship, shine through on the following pages of graphs and tables. I encourage you to use the information in this Snapshot to gain an appreciation for the breadth and depth of action being taken to increase energy efficiency in buildings and plants, as well as to focus in on the ENERGY STAR activity in your sector or location.

The numbers speak for themselves. To highlight a few milestones, as of the end of 2014, more than:

- 50,000 Portfolio Manager account holders, representing over 400,000 buildings totaling over 35 billion square feet, have benchmarked their energy performance;
- 25,000 Portfolio Manager account holders, representing 95,000 buildings, have benchmarked their water performance;
- 25,000 commercial buildings and industrial plants, encompassing more than 3.5 billion square feet, have earned ENERGY STAR certification;
- 300 plants have achieved the ENERGY STAR Challenge for Industry;
- 600 design projects have earned Designed to Earn ENERGY STAR recognition;
- 5,500 buildings participated in the 5th Annual ENERGY STAR National Building Competition, saving more than 2 billion kBtu and \$50 million.

In total, roughly 40% of U.S. commercial building square footage has used ENERGY STAR Portfolio Manager to benchmark energy performance. The major factor driving widespread adoption of Portfolio Manager is the value it brings to organization-wide energy management, with public and private, large and small organizations voluntarily making its use a standard business practice. And while voluntary benchmarking remains the main driver of activity, in recent years more than a dozen municipalities, recognizing the tremendous value of benchmarking, have passed laws requiring commercial buildings to benchmark energy and/or water consumption using ENERGY STAR Portfolio Manager.

As you will see in the pages that follow, our ENERGY STAR partners were very busy in 2014! We look forward to working with you to build on the successes of 2014 in reducing energy waste and carbon emissions. Here's to an even busier 2015!

Jean Lupinacci  
Chief, ENERGY STAR Commercial & Industrial Buildings  
U.S. Environmental Protection Agency

## National Benchmarking

Organizations across the nation are benchmarking building energy and water consumption using Portfolio Manager. More than 50,000 accounts track building energy use, and more than 25,000 accounts track building water consumption.

These accounts collectively hold more than 400,000 buildings and more than 35 billion square feet of space for which energy and water is tracked (Figure 1). While new buildings continue to access the tool each year, the growth in square footage varies as compared to growth in building count. Since historically building types with typically large floor area, such as offices, K-12 schools, retail stores and hospitals, have benchmarked energy and water use in Portfolio Manager, this trend suggests that ENERGY STAR may have reached a certain benchmarking saturation point among very large buildings, and is now attracting smaller buildings, as well.

Of the more than 80 building types benchmarked in Portfolio Manager, the building types representing the greatest number of benchmarked buildings include retail, office, K-12 school, bank, and multifamily housing (see Figure 2a). However, when assessing square footage benchmarked in Portfolio Manager, a slightly different group of building types emerges: office leads for cumulative benchmarked square footage, followed by K-12, multifamily housing, retail, and hospital (Figure 2b). Taken together, these charts tell a story about building size. For example, while retail stores make up 19% of all benchmarked buildings, they only make up 8% of the benchmarked square footage. This indicates that the retail stores benchmarked in Portfolio Manager are small compared to offices, for example, which make up roughly the same number of benchmarked buildings but represent 28% of the total benchmarked square footage.

Detailed information about buildings benchmarked by state, Office of Management and Budget-defined Core-Based Statistical Area (CBSA), and building type is provided in Appendices A, B, and C.

**Figure 1.** Cumulative buildings and square footage benchmarked in Portfolio Manager

**Figure 2a.** Cumulative buildings benchmarked in Portfolio Manager by type

**Figure 2b.** Cumulative square footage benchmarked in Portfolio Manager by type

## State & Local Benchmarking

Governments at all levels play an important role in the ENERGY STAR program. Many are taking important steps to protect the environment and reduce energy and water use. State and local governments across the country are adopting policies that leverage ENERGY STAR tools to reduce energy use in commercial buildings, through both voluntary campaigns and required policy measures.

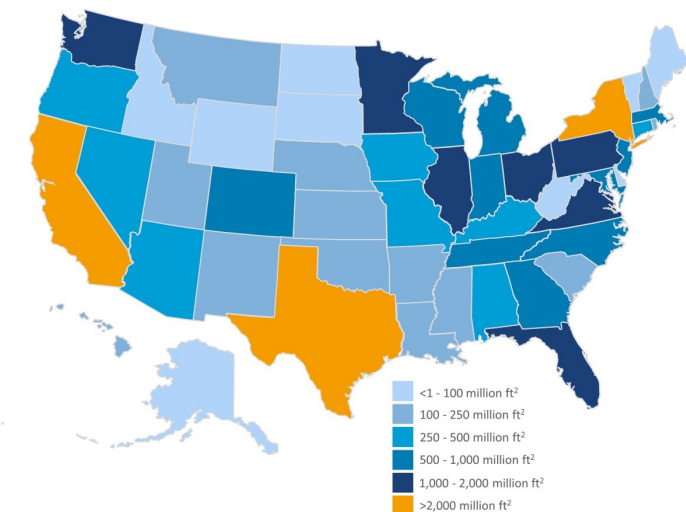

Figure 3a shows that every state in the nation is home to buildings for which energy or water use has been benchmarked in Portfolio Manager. Figure 3b highlights the states with the most growth in benchmarking activity between 2013 and 2014. Interestingly, not all states with high rates of benchmarking growth are those that have low numbers of benchmarked buildings.

Figure 4 provides a similar chart for city benchmarking. Here we see a number of cities in Tennessee with high benchmarking growth rates between 2013 and 2014. The chart also illustrates the difference in benchmarking and square footage growth in different locales. For example, while the growth in buildings benchmarked in Dayton, Ohio and Oklahoma City, Oklahoma is roughly equal, the growth in square footage in Dayton is much greater than that in Oklahoma City.

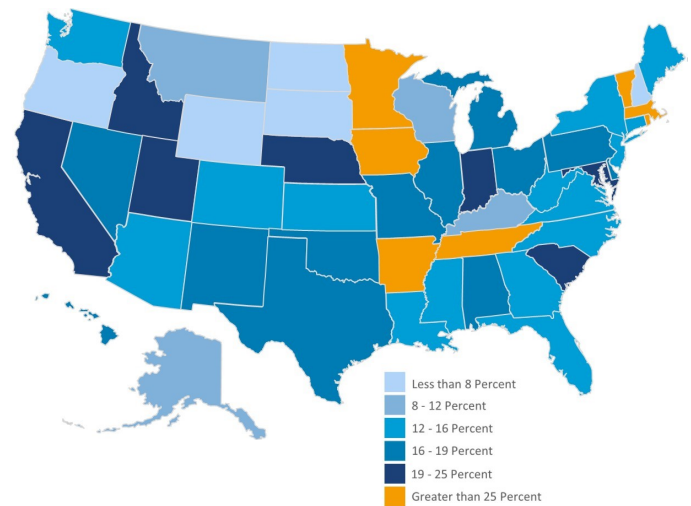

More information about mandatory and voluntary state and local programs that leverage ENERGY STAR can be found at <http://www.energystar.gov/government>.

Detailed benchmarking data, by state and CBSA, is provided in Appendices A and B.

**Figure 4. Top 10 CBSAs by growth in benchmarked buildings, 2013 to 2014 (cumulative)**

## ENERGY STAR Certification for Buildings

To be eligible for ENERGY STAR certification, a building must earn an ENERGY STAR score of 75 or higher, indicating that it performs better than at least 75 percent of similar buildings nationwide. These buildings typically use about 35 percent less energy than average buildings. Since 1999 ENERGY STAR has certified nearly 25,000 buildings and more than 3.5 billion square feet of space (Figure 5).

The following building types are eligible to earn the ENERGY STAR: bank, courthouse, data center, distribution center, financial office, hospital, hotel, K-12 school, non-refrigerated warehouse, office, multifamily housing, refrigerated warehouse, retail store, senior care community, supermarket/grocery, worship facility, and wholesale club/supercenter.

In 2014, roughly one-third of the more than 6,800 buildings certified were certified for the first time; the remaining two-thirds had already been certified in a prior year. This demonstrates the value of certification, as well as continued energy efficiency over time.

Figures 6a and 6b summarize ENERGY STAR certified buildings by type and illustrate that office, K-12 school, retail, and supermarket make up the majority of ENERGY STAR certified buildings.

These figures also help to show the relative size of certified buildings. For example, while hospitals are the ninth most frequently certified building type, they come in fourth in terms of certified square footage.

Table 1 demonstrates the distribution of certified buildings by size. More than half of all certified buildings are smaller than 100,000 square feet, but nearly 20% of certified buildings are larger than 200,000 square feet.

Detailed ENERGY STAR certification data is provided by state, CBSA, and building type in Appendices D, E, and F.

**Figure 5. Cumulative ENERGY STAR certified buildings and square footage**

**Figure 6a. Cumulative ENERGY STAR certified buildings by type**

**Figure 6b. Cumulative ENERGY STAR certified square footage by type (millions)**

**Table 1. Distribution of cumulative certified buildings by square footage**

Range of Square Footage	Percent of Certified Buildings
<50,000	25%
50,001 to 100,000	32%
100,001 to 150,000	17%
150,001 to 200,000	7%
>200,000	19%

## ENERGY STAR Certification for Plants

More than 130 industrial facilities earned ENERGY STAR certification through 2014, indicating superior energy efficiency. More than ten types of industrial plants can earn ENERGY STAR certification, including cement manufacturing, wet corn milling, cookies & crackers, juice, potato products, flat glass, container glass, auto assembly, petroleum industry, pharmaceuticals, pulp mill, and integrated mill. A break out of certified plants by type is provided in Figure 7.

Detailed industrial plant certification data is provided in Appendices G and H. For more information, visit <http://www.energystar.gov/epis>.

Figure 7. Cumulative certified plants by type

## Designed to Earn the ENERGY STAR

A design project that achieves Designed to Earn the ENERGY STAR meets strict EPA criteria for estimated energy performance. It signifies that, once built, the building is poised to achieve top energy performance, and earn ENERGY STAR certification.

The majority of design projects fall in the K-12, office, supermarket, retail, and residence hall/dormitory building categories (Figure 8). However, there are a number of other building types that have earned this distinction.

Detailed data is provided in Appendices I and J. For more information, visit: <http://www.energystar.gov/buildings/service-providers/design/why-you-should-design-earn-energy-star>.

Figure 8. Cumulative Designed to Earn the ENERGY STAR projects

## ENERGY STAR Challenge for Industry

The ENERGY STAR Challenge for Industry is a campaign designed to help energy managers and industrial sites improve energy performance and set goals. Industrial sites participate by committing to the pre-established goal of reducing energy intensity by 10 percent within 5 years or less.

In 2014, 119 sites achieved the challenge and reported an average energy use intensity reduction of 20% (Figure 9). Since 2010, when the Challenge was launched, more than 300 industrial facilities have achieved the Challenge, reducing emissions by more than 12 million metric tons.

For more information, visit

<http://www.energystar.gov/industrychallenge>.

## The EPA National Building Competition

In 2014, EPA hosted its fifth season of the ENERGY STAR National Building Competition. This competition year, EPA recognized top buildings as well as top teams that reduced the most energy or water consumption on a percentage basis over 12 months. More than 100 teams and 5,500 buildings from all 50 states, Puerto Rico, and the District of Columbia battled the scale and each other. Together they saved more than \$50 million, and reduced greenhouse gas (GHG) emissions by more than 250,000 MtCO<sub>2</sub>e. The average building reduced its energy use by 6% and saved nearly \$20,000.

The overall winner was the team that demonstrated the largest year-over-year percentage reduction in energy “weight”, defined as energy use adjusted for weather and the square footage of team buildings. In 2014, the winner was team Going Blue for Woodville from Woodville, Alabama, a 741-person town. The five-building team, which included a town hall, community center, chapel, co-op building, and wastewater treatment plant, reduced its energy use by 25% over 12 months, beating out more than other 100 teams. EPA also recognized the Woodville, Alabama chapel as the top performing building in 2014, for an energy use reduction of 68.4%.

EPA also recognized more than 100 buildings for energy or water savings of 20% or more. All winners were required to have their data verified by a Professional Engineer or Licensed architect to earn ENERGY STAR recognition.

Read about the successful strategies competitors have used to win during each competition year, and get their best energy-saving advice at

<http://www.energystar.gov/BattleoftheBuildings>.

Note: Changes in cumulative certified square footage may be negative. This may occur, for example, if a property is certified in 2013, then reduces its square footage and applies for certification again in 2014. While this table summarizes unique certified buildings, the cumulative square footage reported for each year reflects the square footage value which was submitted with each building's most recent certification application.

<b>Total</b>	<b>22,984</b>	<b>3,441,450,760</b>	<b>25,340</b>	<b>3,736,597,095</b>	<b>10%</b>	<b>9%</b>

Note: Changes in cumulative certified properties and square footage may be negative. This may occur, for example, if a property is certified as "Bank Branch" in 2013 or before, and then has a legitimate change in property type to "Financial Office" in 2014. In this case, the cumulative number of certified "Bank Branch" buildings and square footage would decrease from 2013 to 2014. Percent change in building count and square footage do not necessarily vary in the same proportion.

## Appendix G. ENERGY STAR Certified Plants by State

State	Cumulative Certified Plants		Change 2013 to 2014
	2013	2014	
Alabama	6	7	1
Arizona	2	2	0
California	11	11	0
Colorado	1	1	0
Delaware	1	1	0
Florida	4	4	0
Georgia	4	4	0
Idaho	2	3	1
Illinois	3	4	1
Indiana	7	7	0
Iowa	4	4	0
Kansas	1	1	0
Kentucky	5	5	0
Louisiana	3	3	0
Maine	1	1	0
Maryland	1	1	0
Massachusetts	2	2	0
Michigan	3	3	0
Minnesota	4	4	0
Mississippi	2	2	0
Missouri	6	7	1
Montana	2	2	0
Nebraska	2	2	0
New Jersey	1	1	0
New Mexico	1	1	0
New York	1	2	1
North Carolina	2	2	0
North Dakota	1	1	0
Ohio	7	7	0
Oklahoma	3	3	0
Oregon	3	3	0
Pennsylvania	2	3	1
Puerto Rico	2	2	0
South Carolina	1	1	0
South Dakota	1	1	0
Tennessee	5	5	0
Texas	8	8	0
Utah	2	3	1
Virginia	2	2	0
Washington	9	9	0
West Virginia	0	1	1
Wisconsin	3	3	0
<b>Total</b>	<b>131</b>	<b>139</b>	<b>8</b>

## Appendix H. ENERGY STAR Certified Plants by Type

Plant Type	Cumulative Certified Plants		Change 2013 to 2014
	2013	2014	
Automobile Assembly	22	22	0
Cement Manufacturing	45	50	5
Container Glass	7	7	0
Cookie and Cracker Baking	18	19	1
Frozen Fried Potato Processing	13	14	1
Juice Processing	1	1	0
Petroleum Refining	10	11	1
Pharmaceutical Manufacturing	8	8	0
Wet Corn Milling	7	7	0
<b>Total</b>	<b>131</b>	<b>139</b>	<b>8</b>

## Appendix I. Designed to Earn the ENERGY STAR Projects by State

State	Cumulative Certified Projects		Change 2013 to 2014
	2013	2014	
Alabama	3	3	0
Arkansas	4	4	0
Arizona	7	8	1
California	38	40	2
Colorado	25	25	0
Connecticut	8	8	0
District of Columbia (D.C.)	3	3	0
