Award Recipient of the ENERGY STAR Challenge for Industry

CEMEX San Diego Terminal
1155 Terminal Street
San Diego, CA. 92101

CEMEX is a global building materials company that provides high-quality cement, ready-mix concrete and aggregates along with a Superior Customer Experience through our expansive U.S. network that includes more than 40 distribution terminals around the country.

Operations at CEMEX's San Diego Terminal began in 1978, distributing cement that is essential for use in area homes, roads, schools and businesses in the southern California. The terminal is centrally located near downtown San Diego, which decreases customer travel time and costs. The terminal receives cement by truck and rail from CEMEX's Victorville Cement Plant, and has the capability of receiving cement by vessel.

In 2016, the San Diego Terminal achieved a 12.2-percent reduction in energy intensity, compared to the prior year. The ENERGY STAR® Challenge for Industry is a national call-to-action to improve energy efficiency by 10 percent within five years. The San Diego terminal achieved it in just one year.

The San Diego Terminal reduced their energy consumption by completing projects and executing strategies to improve their onsite energy intensity. Workers were educated on energy-management practices and procedures for the proper operation of plant equipment. Outdated light bulbs at the terminals were replaced with more energy-efficient LED lighting. The process of enhancing lighting at the terminals continues, and workers at the terminals are focused on looking for more ways to save energy in the future.

CEMEX's U.S. network includes 11 cement plants, 43 strategically located distribution terminals, 57 aggregate quarries and more than 270 ready-mix concrete plants. CEMEX is a corporate partner of the ENERGY STAR® program and is an active proponent of the importance of energy efficiency.
