

# HOT WATER, HOTTER SAVINGS

**ENERGY STAR® CERTIFIED**  
ELECTRIC WATER HEATERS ARE  
INDEPENDENTLY CERTIFIED TO:

- ✓ Save Energy
- ✓ Save Money
- ✓ Protect the Environment

And now with a **\$300 federal tax credit** and big rebates available in many areas, ENERGY STAR water heaters offer the hottest savings ever for you and the planet.

WATER HEATERS ARE THE **2<sup>ND</sup>**  
HIGHEST ENERGY USER IN THE HOME.

An ENERGY STAR certified water heater uses less than half the energy of a standard electric storage model and can save a family of four more than \$3,500 over its lifetime.

**IS AN ELECTRIC WATER HEATER RIGHT FOR YOU?**

An electric heat pump water heater uses advanced technology to do the job with significantly less energy. In most homes they can be installed right where your current water heater sits, making them the best choice for your home. ENERGY STAR now makes it easy to determine whether an electric water heater is right for your home with our new mobile-friendly, Water Heater Replacement Guide at [energystar.gov/waterheaterguide](http://energystar.gov/waterheaterguide).

The guide walks you through 4 simple installation considerations:

- 1 Electricity Supply:** Your current water heater is electric, not gas.
- 2 Access to Air:** You have a location for your new water heater that is greater than 40 degrees F and well ventilated.
- 3 Head Room:** You have the necessary ceiling height (heat pump water heaters are taller).
- 4 Water Drainage:** You have any area for drainage, like a nearby floor drain, or other outlets via a small condensate pump.

**DON'T GET CAUGHT OFF GUARD!**

If your water heater is more than 10 years old, you could be risking leaks and flooding.

Here are **5 common signs** that your water heater is about to fail:

- 1** Rust in your water
- 2** Lack of available hot water
- 3** Visible corrosion on the tank or lines coming in and out
- 4** Water leaking from the tank
- 5** Rumbling noises

If you are experiencing any of these signs, replacing now will save you a lot of trouble.

**GOOD FOR YOU.  
GOOD FOR THE PLANET.**

If all residential water heaters sold in the U.S. were ENERGY STAR certified, the energy cost savings would grow to almost \$12 billion annually, preventing nearly 140 billion lbs of greenhouse gas emissions — equal to the emissions from more than 13 million vehicles, every year!

**START SAVING TODAY!**

Once you've determined that an electric water heater is for you, ENERGY STAR also makes it easy to find the right model, as well as available rebates with the Water Heater Finder tool. What's more, the Water Heater Finder includes a searchable list of installers experienced with electric water heater installation and operation. Visit [energystar.gov/waterheaters](http://energystar.gov/waterheaters).
