HOT WATER, HOTTER SAVINGS

ENERGY STAR® CERTIFIED GAS WATER HEATERS ARE INDEPENDENTLY CERTIFIED TO:

- ☑ Save Energy
- ☑ Save Money
- ☑ Protect the Environment

And now with a **$300 federal tax credit** rebates available in many areas, ENERGY STAR water heaters offer the hottest savings ever for you and the planet.

WATER HEATERS ARE THE 2ND HIGHEST ENERGY USER IN THE HOME.

Upgrade now to a new ENERGY STAR certified gas water heater for energy savings. Water heaters that earn the ENERGY STAR label are independently certified to save energy and money, and help protect the climate.

CHOOSE YOUR SAVINGS WITH ENERGY STAR

An **ENERGY STAR certified gas storage water heater** uses about 8% less energy through better insulation, heat traps, and more efficient burners

An **ENERGY STAR certified tankless water heater** can save a family of four more than $1,700 over its lifetime on gas bills compared to a standard gas storage model by heating water only when you need it.

DON'T GET CAUGHT OFF GUARD!

If your water heater is more than 10 years old, you could be risking leaks and flooding.

Here are **5 common signs** that your water heater is about to fail:

1. Rust in your water
2. Lack of available hot water
3. Visible corrosion on the tank or lines coming in and out
4. Water leaking from the tank
5. Rumbling noises

If you are experiencing any of these signs, replacing now will save you a lot of trouble.

GOOD FOR YOU. GOOD FOR THE PLANET.

If every gas water heater sold in the U.S. were ENERGY STAR certified, the energy cost savings would grow to almost $1.2 billion annually, preventing nearly 10 billion lbs of greenhouse gas emmissions — equal to the emissions from 900,000 vehicles, every year!
